**Dimensions of Creativity** Margaret A. Boden, 1996 Dimensions of Creativity brings together original articles that draw on a range of disciplines from the history and sociology of science psychology philosophy and artificial intelligence to ask how creative ideas arise and whether creativity can be objectively defined and measured Dimensions of Creativity brings together original articles that draw on a range of disciplines from the history and sociology of science psychology philosophy and artificial intelligence to ask how creative ideas arise and whether creativity can be objectively defined and measured Margaret Boden and her colleagues Simon Schaffer Gerd Gigerenzer David N Perkins Howard Gardner Colin Martindale and Hans J Eysenck demonstrate that creativity requires not only challenging new ideas but their acceptance by some relevant social group Although some new ideas can arise as novel associations others are generated by exploiting structural features of an existing conceptual space Strong motivations often drive the creators and those who evaluate and perpetuate their work The seven essays although very different are complementary The book can serve as an up to date introduction to the study of creativity in various disciplines The many references provide a way into the relevant literature A Bradford Book

The Creative Mind Margaret A. Boden, 2004-02-24 How is it possible to think new thoughts What is creativity and can science explain it And just how did Coleridge dream up the creatures of The Ancient Mariner When The Creative Mind Myths and Mechanisms was first published Margaret A Boden's bold and provocative exploration of creativity broke new ground Boden uses examples such as jazz improvisation chess story writing physics and the music of Mozart together with computing models from the field of artificial intelligence to uncover the nature of human creativity in the arts The second edition of The Creative Mind has been updated to include recent developments in artificial intelligence with a new preface introduction and conclusion by the author It is an essential work for anyone interested in the creativity of the human mind

*Language, Mind, and Brain* T. W. Simon, R. J. Scholes, 2019-01-22 The chapters in this volume are extended versions of material first presented at the National Interdisciplinary Symposium on Language Mind and Brain held April 6-9 1978 in Gainesville Florida Importantly for interdisciplinary goals the papers contained in this volume are quite available that is papers by philosophers can easily be read and understood by linguists and psychologists the ideas of the linguists are readily comprehensible to any educated reader the psychologists and neurologically oriented writers are clear and understandable It is then a volume that cuts not so much across disciplines but through them First published in 1982 Routledge is an imprint of Taylor Francis an informa company Philosophy of Artificial Intelligence Rajakishore Nath, 2009 This book deals with the major philosophical issues in the theoretical framework of Artificial Intelligence AI in particular and cognitive science in general The researchers in AI are concerned with the issues of consciousness human subjectivity creativity etc Cognitive Science and AI argue that consciousness can be artificially created and comprehended in the function of robots The robotic

activities explain the mechanism involved in computation language processing sensing the information etc Contrary to this thesis the philosophical study tries to show that human consciousness thinking imagination etc are much larger concepts and need to be delved into in the broad theoretical framework This book is a critique of the mechanistic theory of mind It shows the basic foundation of AI and its limitations in explaining the activities of the human mental life Machine functionalism fails to account for the subjective nature of consciousness and the creativity involved in the conscious acts There are two aspects of this thesis the epistemological and the metaphysical Epistemologically the subject of consciousness intimately knows the raw feelings or the qualia Metaphysically speaking however the raw feelings are real in the sense that they are part of the furniture of the mental world Therefore we can hardly deny that the mental world is real **Creativity in Human**

**Evolution and Prehistory** Steven Mithen,2005-08-10 The book examines how our understanding of human creativity can be extended by exploring this phenomenon during human evolution and prehistory **Artificial Intelligence and Creativity**
