Cscl Theory And Practice Of An Emerging Paradigm:

Cscl Timothy Koschmann, 2012-10-12 This book about a newly emerging area of research in instructional technology has as its title the acronym CSCL. Initially CSCL was chosen as an acronym for Computer Supported Collaborative Learning. However, some would argue that collaborative is often not a descriptive term for what learners do in instructional settings. Further, as the field develops, the technology used to support collaboration may not always involve computers, at least not in the direct ways they have been used to support instruction in the past. To avoid getting bogged down in this terminological debate, this book uses CSCL as a designation in its own right, leaving open to interpretation precisely what words it stands for. The authors talk a great deal about the theory underlying their work. In part, this is because that is what they were asked to do, but it is also an indication of the state of the field. In an established paradigm in which the theories and methods are well agreed upon, such discussion is less central. CSCL, however, has not yet reached the stage of normal science. There is much to be worked out yet. This book is offered with the hope that it will help to define a direction for future work in this field. The chapters appear in alphabetical order, except for the introductory chapter and the afterword, not for lack of a better way to organize the chapters, but rather because the organizational possibilities are too numerous and this order does not privilege one over another. By not imposing a topical organizing structure on this collection, it is hoped that readers will feel freer to explore the chapters in a way that best suits their needs. Computer-Supported Collaborative Learning in Higher Education Roberts, Tim S., 2004-09-30 This book addresses computer supported collaborative learning, also known as CSCL, particularly within a tertiary education environment. It includes articles on theory and practice in this area, including topics such as how can groups with shared goals work collaboratively using the new technologies? What problems can be expected and what are the benefits? In what ways does online group work differ from face to face group work? And what implications are there for both educators and students seeking to work in this area. [The Cambridge Handbook of the Learning Sciences](#) R.
