A Farmer's Love Walter Moora, 2011 A Farmer's Love is the story of the author's spiritual journey and how his relationship to the Earth evolved from an experience of basic utility to an experience of abiding love Farmers seldom bare their souls in books but Walter Moora struggled and wrestled the words in this book from his heart He offers more than specific descriptions of farming he tells his life story as a biodynamic farmer and how he learned the lessons of creating healthy ecosystems on the farm through biodynamic preparations and by planting according to the stars The author learned early in his farming career that working with Nature is infinitely more satisfying and ultimately far more successful than working against Nature with chemicals His experience of farming biodynamically on four continents taught him to listen to what the land itself asks for A Farmer's Love explains how nutrition in the food we eat comes directly from nutrition in the soil in which the plants grow The book also explains ways the author learned to work with the soil to make it nutrient rich without the use of synthetic chemicals It chronicles Walter's experience of learning both the physical and spiritual aspects of creating a whole healthy farm ecosystem Through his life experiences the author learned to trust his intuition to take risks around his values to find his soul's destiny and to deal with death and loss by trusting that the very best things can come directly from the very worst things This story is for those who want to enrich their spiritual connection with the Earth and for budding farmers everywhere who are interested in caring for the Earth in a new way

Pfeiffer's Introduction to Biodynamics Ehrenfried Pfeiffer, 2011 A comprehensive book on the key principles of biodynamics

A Biodynamic Manual Pierre Masson, 2011 For anyone already practicing or turning to biodynamic gardening and farming methods numerous detailed questions arise such as How do you choose your seeds What fertilisers should you use Which natural products are most effective This manual fully illustrated with explanatory diagrams and photographs provides the answers The book covers all aspects of making and using biodynamic preparations and composts managing the health of plants weed control parasite control issues around mixed cultivation animal care specialised crops and planting such as fruit trees and vines Although the technical aspects of biodynamic growing are exhaustively covered the author also considers the human qualities necessary for this kind of agriculture to succeed This is an invaluable guide for all biodynamic growers to have to hand daily

Cosmos, Earth and Nutrition Richard Thornton Smith, 2013-04-03 In recent years there has been an explosion of interest in organic and biodynamic produce Although once marginal and alternative escalating concerns about the environment health food quality and animal welfare have brought organics into mainstream consciousness Biodynamics a

unique development of the organic approach does not narrowly focus on agricultural techniques It was conceived as a new way of thinking about farming nutrition and the world of nature allowing for a revitalized relationship with the living soil the elemental world and the cosmos Originating from a series of eight lectures given by Dr Rudolf Steiner in 1924 biodynamics broadens the outlook of agriculture and the science behind it leading to a holistic perspective that incorporates astronomical rhythms and unique preparations for plants and earth The author describes the foundations on which not only biodynamics but also the wider organic movement is based He builds bridges between mainstream science and Steiner s insights making it easier for the wider organic and ecological movement to approach biodynamic concepts and practise This book has much to offer to the beginner as well as to those already involved with biodynamics Its broad range of topics including the ecology of the farm organism food quality and nutrition community supported agriculture planetary influences seed quality and the vitality of water contribute to a deeper understanding of the subject The author is also concerned to promote innovation so that biodynamics moves with the times An appendix includes details for contacting various elements of the biodynamic world

DR RICHARD THORNTON SMITH was formerly a geography professor at the University of Leeds specializing in soil science environment and conservation Widely travelled he has a long standing interest in indigenous and sustainable farming He was introduced to the work of Rudolf Steiner at an early age although his full involvement with biodynamics dates from 1990 when he began to participate in training programmes and workshops at Emerson College Sussex In 1996 he began a biodynamic extension programme in Sri Lanka for which he published a book most recently updated in 2007 Since 2001 he has been an inspector for the Biodynamic Association s Demeter and Organic Certification in the UK In 2003 he produced an edited selection of Steiner s work relating to agriculture He is currently a council member of the Biodynamic Agricultural Association and lives in Ross on Wye Herefordshire
