## **A Child's Way To Water Play:**

**Exploring the Pedagogy of Learning and Playing Outdoors** Mehmet Mart, Georgia Gessiou, Jane Waters-Davies, 2025-02-14 Focusing on the empirical evidence base for pedagogical decisions taken when children are playing and learning outside this groundbreaking book examines the intention and purpose of children's outdoor playful activity and the associated issues of pedagogy. Chapters address questions about the role of the adult in children's learning outside in a manner that is inclusive in nature by recognising the varied contexts in which children's playful activity outside takes place. Reflecting multiple cultural contexts, chapters consider social and physical aspects to ensure value systems are visible and critically considered. The book acknowledges the continuum of children's outdoor experience from highly structured activity to free play outside. It also examines the existing evidence base about children's outdoor play including a consideration of how adults construct and respond to children's playful activity outside to realise the associated benefits. With reference throughout to many international contexts, this book reminds us of the shaping force of cultural practices and beliefs about children's playful activity outside and will be of interest to undergraduate and postgraduate audiences studying early childhood education.

**Children's Ways with Science and Literacy** Maria Varelas, Christine C. Pappas, 2013-05-07 Science is often a forgotten subject in early elementary grades as various mandates require teachers to focus on teaching young students to achieve specific reading and mathematical competencies. This book offers specific examples and empirical evidence of how integrated science literacy curriculum and teaching in urban primary grade classrooms give students opportunities to learn science and to develop positive images of themselves as scientists. The Integrated Science Literacy Enactments ISLE approach builds on multimodal multidimensional and dialogically oriented teaching and learning principles. Readers see how as children engage with texts, material objects, dialogue, ideas, and symbols in their classroom community, they are helped to bridge their own understandings and ways with words and images with those of science. In doing so, they become learners of both science and literacy. The book features both researcher and teacher perspectives. It explores science learning and its intersection with literacy development in schools that educate predominately children of color, many of whom struggle with poverty and have been traditionally underestimated, underserved, and underrated in science classrooms. In all these ways, this volume is a significant contribution to a critically under-researched area of science education.

**Educating Young Children through Natural Water** Judit Horvath, 2015-10-08 Coastlines, rivers, and natural waters have a huge amount to offer young children, providing a unique environment for their learning and development. The environment and its almost daunting size touches something deep within the children, and surprisingly, the large space brings them closer together. This book provides a comprehensive guide to Natural Water School provision by exploring its special pedagogy, the organisation and management of the Water School session, and discussing the learning environment and its implications for children's wellbeing and development. It clearly explains the key principles of this recently developed contemporary approach.

and sets out a framework for setting up and leading a Natural Water School programme The book shows how the aims and outcomes of early years education including the Early Years Foundation Stage can all be achieved within the Natural Water School environment and is supported by examples and case studies throughout Full of practical suggestions and activities it includes Activity ideas covering topics such as wildlife sensory activities crafts social development physical play and construction in different seasons Unique teaching tools to observe and develop the children Ideas for working with children of different ages and learning styles Detailed guidance on health and safety including risk assessments Offering a sound historical background a solid pedagogical framework and a step by step guide to Natural Water School practice this handy text will help students and practitioners to fully understand this new and increasingly popular approach to early years education and how it can benefit the children they care for
