Cytokines In Veterinary Medicine:

Cytokines in Veterinary Medicine Virgil E. C. J. Schijns, Marian C. Horzinek, 1997 Cytokines are proteins that act as intercellular signals in a variety of processes including embryonic development haematopoiesis stress inflammation immunity and tissue repair In the 1980s researchers established the link between cytokines and the immune endocrine and neuronal systems for both humans and rodents With advances in recombinant DNA and PCR technologies cytokine research has exploded with much recent work focusing on farm and domestic animals This book addresses the clinical potential of cytokines for veterinary medicine Covering cattle sheep pigs horses cats and dogs the book reviews the role of cytokines in pathogenesis diagnosis and therapy for animal diseases It discusses the use of animal models to investigate analogous human diseases It also examines how cytokines might be used to monitor diseases and improve the health of livestock and how they might work as vaccine adjuvants or adjuncts to chemotherapy Written by leading authorities from Europe North America Africa and Australia the book is essential for researchers in veterinary microbiology and immunology as well as medical scientists interested in applying this work to human health

Animal Biotechnology L.A. Babiuk, J.P. Phillips, Murray Moo-Young, 2013-10-22 The advent of biotechnology has the potential to develop a variety of novel or better quality products for the treatment of a large number of diseases in livestock In addition as we understand more about the reproductive physiology of animals the potential exists to dramatically increase the productivity of animals through better therapeutics and diagnostics for the control of many infectious diseases Productivity can also be increased through animal breeding strategies including gene transfer micromanipulation of embryos and gamete sex selection As well as being a valuable reference to current knowledge in these areas this first supplement to *Comprehensive Biotechnology* also looks at societal concerns over the use of antibiotics and

chemical residues in meat and milk products which are forcing biotechnologists to investigate more natural means of controlling infection by stimulating the animal's own immune system to combat infection. The identification of a variety of cytokines which are involved in regulating immune responses provides opportunities to use the animal's natural defence mechanisms to combat many infections or increase the animal's resistance to such infections. These approaches should provide tools for eventual elimination of specific diseases from counties, regions or whole continents. *Annual Report of the College of Veterinary Medicine* Kansas State University. Laboratory Animal Medicine James G. Fox, F. Claire Hankenson, Kelly A. Metcalf Pate, Kathleen R. Pritchett-Corning, Mark A. Suckow, 2026-06-12. *Laboratory Animal Medicine* Fourth Edition a volume in the American College of Laboratory Animal Medicine ACLAM blue book series is the authoritative reference on the biology, health and care for species involved in research. Edited by recognized veterinary operational and research experts and endorsed as the official material for veterinary specialty certification by ACLAM, this work defines the standard for all aspects of humane laboratory animal care and science with animal models. This new edition contains significant changes in content and organization to reflect the evolution of the field. The animal welfare chapter has been moved to the beginning of the book to highlight this subject's importance. Other chapters have either been consolidated to encourage the reader to recognize commonalities such as those between guinea pigs, gerbils and hamsters or separated out in recognition of expansions in knowledge and cross-species complexity as illustrated by separate new and old world primate chapters. Advances in practice, technology and knowledge are highlighted in the chapters on genetically modified organisms with updates on new techniques in genetic engineering and consideration of non-rodent genetically modified models, microbiological monitoring with an increased emphasis on environmental monitoring and sentinel-free colony health monitoring methods, regulatory compliance with a comprehensive chapter on birds, employee health and safety with expanded consideration of compassion fatigue and animal models in biomedical research with increased emphasis on experimental design and rigor. New chapters on animal models for microbiome, infectious disease and transplant research have been added to serve as a reference for the community. This book is an excellent reference for veterinarians and research scientists as well as program directors and facility managers employed in a variety of academic and corporate settings. This edition continues the tradition of this text in setting standards for the research animal science community as well as expanding and updating relevant and essential topics for this specialty field. Covers the most important species used in life sciences research focusing on biology, diseases and management. Provides a renewed focus on animal welfare and expanded coverage of non-human primates, fishes, avian models. Includes guidance on laboratory animal program and human resources management. Presents regulations, policies and laws for laboratory animal management worldwide.

Molecular and Cellular Biology of Cytokines Joost J. Oppenheim, 1990. Cytokines are regulatory
