Dictionary of Environment Gurdeep Raj, 1987. In order to keep pace with the continuing rapid developments and expanding vocabularies in all areas of environment an attempt has been made to include old as well as new terms. In this dictionary the terms have been written in clear simple language that is understandable even to non specialists but is consistent with the complexity of the term itself. The environmental movement itself has changed as governments and industries have taken steps to curb the pollution of the environment while pollution has not been concerned to some extent it has ceased to be a matter of primary concern. Some environmentalists have seen nuclear power as a major issue over which they must unite. An attempt has been made to include most entries relating to nuclear power. Ecology is related to environmental science and is still a now discipline. Terms relating to ecology have been included. The earth sciences too have changed over the last few years mainly as a result of the examination of cores taken from the deep ocean floor. An attempt has been made to include changes to take account of recent findings. The dictionary will be of value to students of environments and to scientists and engineers working on pollution problems.
