*Science and Environment in Chile* Javiera Barandiaran, 2018-07-31 The politics of scientific advice across four environmental conflicts in Chile when the state acted as a neutral broker rather than protecting the common good In *Science and Environment in Chile* Javiera Barandiaran examines the consequences for environmental governance when the state lacks the capacity to produce an authoritative body of knowledge Focusing on the experience of Chile after it transitioned from dictatorship to democracy she examines a series of environmental conflicts in which the state tried to act as a neutral broker rather than the protector of the common good She argues that this shift in the role of the state occurring in other countries as well is driven in part by the political ideology of neoliberalism which favors market mechanisms and private initiatives over the actions of state agencies Chile has not invested in environmental science labs state agencies with in house capacities or an ancillary network of trusted scientific advisers despite the growing complexity of environmental problems and increasing popular demand for more active environmental stewardship Unlike a high modernist empire state with the scientific and technical capacity to undertake large scale projects Chile's model has been that of an umpire state that purchases scientific advice from markets After describing the evolution of Chilean regulatory and scientific institutions during the transition Barandiaran describes four environmental crises that shook citizens trust in government the near collapse of the farmed salmon industry when an epidemic killed millions of fish pollution from a paper and pulp mill that killed off or forced out thousands of black neck swans a gold mine that threatened three glaciers and five controversial mega dams in Patagonia

**Environmental Management for Sustainable Development** Christopher J. Barrow, 2002-01-08 Covers the full breadth of principles practice and policy issues concerned with environmental management providing a comprehensive resource and reference point for students and practitioners in this field *Barry Commoner and the Science of Survival* Michael Egan, 2007 Chronicles the activist career of Barry Commoner one of the most influential American environmental thinkers and his role in recasting the environmental movement after World War II For over half a century the biologist Barry Commoner has been one of the most prominent and charismatic defenders of the American environment appearing on the cover of Time magazine in 1970 as the standard bearer of the emerging science of survival In *Barry Commoner and the Science of Survival* Michael Egan examines Commoner s social and scientific activism and charts an important shift in American environmental values since World War II Throughout his career Commoner believed that scientists had a social responsibility and that one of their most important obligations was to provide citizens with accessible scientific information so they could be included in public debates that concerned them Egan shows how Commoner moved naturally from calling attention to the hazards of nuclear fallout to raising public awareness of the environmental dangers posed by the petrochemical industry He argues that Commoner s belief in the importance of dissent the dissemination of scientific information and the need for citizen empowerment were critical planks in the remaking of American environmentalism Commoner s activist career can be defined as an attempt to weave together a larger vision of social justice Since the 1960s he has called attention to parallels between the environmental civil rights labor and peace movements and connected

environmental decline with poverty injustice exploitation and war arguing that the root cause of environmental problems was the American economic system and its manifestations He was instrumental in pointing out that there was a direct association between socioeconomic standing and exposure to environmental pollutants and that economics not social responsibility was guiding technological decision making Egan argues that careful study of Commoner s career could help reinvigorate the contemporary environmental movement at a point when the environmental stakes have never been so high The Working Landscape Peter F. Cannavò,2007 Transcending the polarizing debate over development and preservation an innovative proposal for an alternative theory and practice of place that embraces both change and stability *The Enclave Economy* Kevin Gallagher,Lyuba Zarsky,2007 Based on a four year study of the 1990s foreign investment led expansion of the high technology sector in the Mexican state of Jalisco and the extent to which it contributed to the country s economic social and environmental development *Dissent* ,2005 The Code of the City Eran Ben-Joseph,2005 Traces the evolution of urban development codes and standards examines their effect on city planning and design and proposes alternatives that will encourage innovation Rivertown Paul Stanton Kibel,2007 Each case study in Rivertown considers the critical questions of who makes decisions about our urban rivers who pays to implement these decisions and who ultimately benefits or suffers from these decisions book cover **Reinventing Los Angeles** Robert Gottlieb,2007 Describes how water politics cars and freeways and immigration and globalization have shaped Los Angeles and how innovative social movements are working to make a more livable and sustainable city Street Science Jason Corburn,2005-08-19 An analysis of how local knowledge based on the first hand experience of community members can strengthen science in environmental health decision making with four case studies from a Brooklyn neighborhood *Urban Place* Peggy F. Barlett,2005 Cross disciplinary studies find that reconnections to place and to the natural world which are emerging through urban sustainability efforts build community and political action and have important medical and psychological health benefits **Precautionary Politics** Kerry H. Whiteside,2006 A study of the precautionary principle its meaning its rationale its policy implications and the controversies provoked by its use in environmental regulation **Major Problems in American Environmental History** Carolyn Merchant,1993 This volume traces the history of the United States environment through examinations of 14 critical issues including pollution conservation and wilderness preservation **Diamond** Steve Lerner,2006-02-17 The story of how a mixed income minority community in Louisiana s Chemical Corridor fought Shell Oil and won For years the residents of Diamond Louisiana lived with an inescapable acrid metallic smell the toxic bouquet of pollution and a mysterious chemical fog that seeped into their houses They looked out on the massive Norco Industrial Complex a maze of pipelines stacks topped by flares burning off excess gas and huge oil tankers moving up the Mississippi They experienced headaches stinging eyes allergies asthma and other respiratory problems skin disorders and cancers that they were convinced were caused by their proximity to heavy industry Periodic industrial explosions damaged their houses and killed some of their neighbors Their

small African American mixed income neighborhood was sandwiched between two giant Shell Oil plants in Louisiana's notorious Chemical Corridor. When the residents of Diamond demanded that Shell relocate them, their chances of success seemed slim: a community with little political clout was taking on the second largest oil company in the world. And yet, after effective grassroots organizing, unremitting fence-line protests, seemingly endless negotiations with Shell officials, and intense media coverage, the people of Diamond finally got what they wanted: money from Shell to help them relocate out of harm's way. In this book, Steve Lerner tells their story. Around the United States, struggles for environmental justice such as the one in Diamond are the new front lines of both the civil rights and the environmental movements, and Diamond is in many ways a classic environmental justice story: a minority neighborhood faced with a polluting industry in its midst fights back. But Diamond is also the history of a black community that goes back to the days of slavery. In 1811, Diamond, then the Trepagnier Plantation, was the center of the largest slave rebellion in United States history. Descendants of these slaves were among the participants in the modern-day Diamond relocation campaign. Steve Lerner talks to the people of Diamond and lets them tell their story in their own words. He talks also to the residents of a nearby white neighborhood, many of whom work for Shell and have fewer complaints about the plants, and to environmental activists and Shell officials. His account of Diamond's 30-year ordeal puts a human face on the struggle for environmental justice in the United States.

### **The Nature of Cities**

Michael Bennett, David W. Teague, 1999-10. Cities are often thought to be separate from nature, but recent trends in ecocriticism demand that we consider them as part of the total environment. This new collection of essays sharpens the focus on the nature of cities by exploring the facets of an urban ecocriticism, by reminding city dwellers of their place in ecosystems, and by emphasizing the importance of this connection in understanding urban life and culture. *The Nature of Cities* offers the ecological component often missing from cultural analyses of the city, and the urban perspective often lacking in environmental approaches to contemporary culture. By bridging the historical gap between environmentalism, cultural studies, and urban experience, the book makes a statement of lasting importance to the development of the ecocritical movement.
