| 1.               | Arrangement                   | One single, alphabetical sequence of author, title, subject, etc.  | Two parts i) classified part arranged according to class numbers and ii) alphabetical part. Arrangement of entries in the classified part is exactly the same as that of books on shelves and in the alphabetical part is just like a dictionary which is easy to understand and to use. |
| 2.               | Author and title filiations   | Works of the same author, different editions of the same work, different translations of a work kept together.                       | The alphabetical index gets this filiations of authors and works.  |
| 3.               | Subject filiations.           | Related subjects get scattered because of alphabetical arrangement but can be connected by a system of cross references.             | Presents a structured and organized arrangement of subjects, displaying their relations.   |
| 4.               | Distributed relatives         | All distributed relatives are collected and brought together.  | The alphabetical index can perform this function.  |
| 5.               | New subject                   | Can be inserted into the catalogue without any difficulty.   | To be fitted properly in the subject filiation. There may be difficulties to position a new subject into the classification scheme without the permission of the designers of the classification scheme. It may also introduce an element of inconsistency.                              |
| 6.               | Specific subject.             | Provides direct approach to users if he searches under a particular subject and need not required to know the classification scheme. | A reader has to consult alphabetical part first, then taking the class number, he has to refer the classified part then only he can get all the books on the subject.  |
