## **Acid Deposition:**

**Acid Rain - Deposition to Recovery** Peter Brimblecombe, Hiroshi Hara, Daniel Houle, Martin Novak, 2007-12-11 This book looks at the sources and composition of the atmosphere and rainfall with particular attention on acidifying components and those that affect ecosystems It further widens the subject to look at trace metals It includes papers on the impact of deposition on soils and forests and the recovery of the natural environment Work on critical loads makes a contribution to understanding the degree to which deposition must be reduced to limit its impact Acidic Deposition Patricia M. Irving, 1991 A summary of the twenty seven State of Science and State of Technology SOS T Reports published in 1990 by the National Acid Precipitation Assessment Program Cf Pref p 3 Acid Deposition National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Environmental Studies Board, Committee on Monitoring and Assessment of Trends in Acid Deposition, 1986-02-01 How damaging is acid rain Current opinions differ widely in part because for every proposed link between acid rain and adverse environmental effects an alternative explanation based on other phenomena can be or has been proposed and in many cases cannot be readily dismissed The specific areas addressed in this volume include the emissions of sulfur and nitrogen oxides precipitation chemistry atmospheric sulfates and visibility surface water chemistry sediment chemistry and abundance of diatom taxa fish populations and forest productivity The book then draws conclusions about the acid deposition phenomenon relationship identifying phenomena which are directly acid deposition caused and suggesting others apparently caused by human activities unrelated to acid deposition **Acid Deposition: Environmental, Economic, and Policy Issues** Donald Adams, 2012-12-06 Concern about acid deposition commonly referred to as acid rain as a widespread pollution problem with severe ecological consequences has heightened public awareness Many authorities fear that acid deposition may be the worst environmental crisis of our industrialized society because of both the global implications and possible widespread irreversible damage to lakes soils and forested ecosystems Neither state nor international boundaries are exempt from the transport and deposition of airborne pollutants resulting from local and distant emission sources The dilemma and debate will continue as long as society requires fossil fuels for its energy needs without regard to emission constraints This book started as a modest attempt to provide a status report on atmospheric transport the chemical processes which produce acidifying agents and resultant ecological and economic consequences The materials in this book have been substantially revised from those presented at the conference in 1983 It became obvious that additional chapters were required when sudden and profound changes occurring in European forests were reported It is felt that perhaps such damages could be an early warning to forested ecosystems in the northeastern United States and Canada as well as other places throughout the world Most importantly it is essential that gained scientific knowledge be translated into required legislation a section on Policy Issues was incorporated to address these concerns It is hoped that the reader will become informed and concerned

enough to be involved in this global debate Donald D Adams Halter P **Acid Deposition** James W.S. Longhurst, 2012-12-06 The subject of acid deposition remains one of the most urgent of our contemporary environmental problems Research programmes are continually redefining our understanding of cause and effect and hence the continuing need for a timely and authoritative series addressing these issues This volume seeks to review and define our contemporary understanding of acid deposition by reference to new international data and as a consequence assist the definition of our future research requirements and policy developments International contributions to the volume are drawn from the Federal Republic of Germany the U S A Canada Brazil Switzerland Austria Israel France and the United Kingdom Some of these nations have experienced acid deposition on a regional scale for considerable periods of time for others the phenomenon is an emerging problem This collection of papers has been compiled by invitation to eminent members of the acid deposition research community and by selection from a carefully targeted call for papers It is primarily designed to meet the needs of researchers lecturers and postgraduate students in environmental disciplines and for environmental policy makers It is of interest to professionals in related disciplines and essential as a reference text for libraries The volume is divided into four broad themes Emissions chemistry and deposition Ecosystem effects freshwater soils and forest systems Effects on structural materials Mitigation control and management Each of these sections provides an overview of contemporary understanding presents new experimental or field evidence and provides guidance for our future research agenda **Acid Rain** Carter N. Lane, 2003 Acid rain is a broad term used to describe several ways that acids fall out of the atmosphere A more precise term is acid deposition which has two parts wet and dry Wet deposition refers to acidic rain fog and snow As this acidic water flows over and through the ground it affects a variety of plants and animals The strength of the effects depends on many factors including how acidic the water is the chemistry and buffering capacity of the soils involved and the types of fish trees and other living things that rely on the water Dry deposition refers to acidic gases and particles About half of the acidity in the atmosphere falls back to earth through dry deposition The wind blows these acidic particles and gases onto buildings cars homes and trees Dry deposited gases and particles can also be washed from trees and other surfaces by rainstorms When that happens the runoff water adds those acids to the acid rain making the combination more acidic than the falling rain alone Prevailing winds blow the compounds that cause both wet and dry acid deposition across state and national borders and sometimes over hundreds of miles This new book combines an excellent background article with over 900 abstracts and book citations Easy access is provided by title author and subject indexes [Acid Deposition and Related Air Pollution Issues](#) United States.
