Shilling, 2012-12-06 This volume is the third annotated bibliography on this subject area to be compiled by these authors The first published by Gordon and Breach Science Publishers in 1971 was entitled AN ANNOTATED BIBLIOGRAPHY ON DIVING AND SUBMARINE MEDICINE It covered material published during the 1960 s The second volume entitled UNDERWATER MEDICINE AND RELATED SCIENCES A GUIDE TO THE LITERATURE published in 1973 by Plenum Press covered primarily material published during 1970 and 1971 with some material from 1968 and 1969 The present volume covers material published during 1972 and 1973 but here again some earlier material has been included The purpose of these annotated bibliographies is to make available a large proportion of the published material in abstract form indexed in such a manner as to make it possible to compile a reasonably complete annotated bibliography on any specific subject area in the field It is possible thus to learn where the work is being done by whom and how extensively Also it becomes obvious what areas of research are lacking or inadequate These specific searches can also form a background of reference material on which to base further research or from which to write monographs or state of the art surveys Papers articles and reports listed here are in most cases readily available

Comparative Aspects of Extracellular Acid-Base Balance Jean-Paul Truchot, 2012-12-06

Interest in comparative acid base physiology has considerably grown during last decades even in the absence of major technical or conceptual advances This is firstly because it has become clear that the extracellular acid base state reflects the performance of many exchange functions at the organism level respiration and ventilation of the gas exchange surfaces metabolism iono and osmoregulation Such functions are much influenced by ambient conditions and the measurement of acid base parameters thus provides useful information about the organism s responses to environmental challenges Secondly many processes at the molecular level are now known to be pH sensitive and acid base regulation thus appears to be a major requirement for the functional integrity of cells and organisms How extracellular acid base balance can be maintained in a wide variety of animals living in different conditions is the subject of this book The approach is comparative and environ

mental throughout All body fluids share similar buffer proper ties and common physicochemical principles apply to any acid base system However in accord with differing designs and con straints along animal evolution varying effector organs and mechanisms are at work to maintain an appropriate acid base state in the organism Particular emphasis is placed on the fun damental differences between water and air breathers and on the acid base and respiratory problems arising at the transition from an aquatic to a terrestrial life Also the complex array of factors influencing the acid base state in water dwelling animals is thoroughly discussed
