## **Acidic Precipitation:**

**Acidic Precipitation** H.C. Martin, 2013-11-11 Since the beginning of the 1980s research has continued to clarify and improve our understanding of the problem of the ecological impact of acidic precipitation From September 15-20 1985 Canada convened the Muskoka Symposium on Acidic Precipitation to review progress and help chart the direction of future studies The Conference was held in central Ontario Canada a region of heavy sulphate deposition where aquatic effects are evident Approximately 700 people attended over 500 of whom were research scientists Over 400 papers were presented Nearly 200 of the papers are included in these proceedings which together give the present state of the art of acid rain research The Conference focused on atmospheric science and aquatic and terrestrial effects I have made some general observations on progress in clarifying issues and linkages between these areas of research Outstanding issues which require a great deal more work are identified These are my views influenced by personal bias and limited by my expertise

Acid Rain - Deposition to Recovery Peter Brimblecombe, Hiroshi Hara, Daniel Houle, Martin Novak, 2007-12-11 This book looks at the sources and composition of the atmosphere and rainfall with particular attention on acidifying components and those that affect ecosystems It further widens the subject to look at trace metals It includes papers on the impact of deposition on soils and forests and the recovery of the natural environment Work on critical loads makes a contribution to understanding the degree to which deposition must be reduced to limit its impact

Lane, 2003 Acid rain is a broad term used to describe several ways that acids fall out of the atmosphere A more precise term is acid deposition which has two parts wet and dry Wet deposition refers to acidic rain fog and snow As this acidic water flows over and through the ground it affects a variety of plants and animals The strength of the effects depends on many factors including how acidic the water is the chemistry and buffering capacity of the soils involved and the types of fish trees and other living things that rely on the water Dry deposition refers to acidic gases and particles About half of the acidity in the atmosphere falls back to earth through dry deposition The wind blows these acidic particles and gases onto buildings cars homes and trees Dry deposited gases and particles can also be washed from trees and other surfaces by rainstorms When that happens the runoff water adds those acids to the acid rain making the combination more acidic than the falling rain alone Prevailing winds blow the compounds that cause both wet and dry acid deposition across state and national borders and sometimes over hundreds of miles This new book combines an excellent background article with over 900 abstracts and book citations Easy access is provided by title author and subject indexes **Acid Rain** University of Central Florida.
