Video Database Systems Ahmed K. Elmagarmid, Haitao Jiang, Abdelsalam A. Helal, Anupam Joshi, Magdy Ahmed, 2007-08-23

Great advances have been made in the database field Relational and object oriented databases distributed and client server databases and large scale data warehousing are among the more notable However none of these advances promises to have as great and direct an effect on the daily lives of ordinary citizens as video

databases Video databases will provide a quantum jump in our ability to deal with visual data and in allowing people to access and manipulate visual information in ways hitherto thought impossible Video Database Systems Issues Products and Applications gives practical information on academic research issues commercial products that have already been developed and the applications of the future driving this research and development This book can also be considered a reference text for those entering the field of video or multimedia databases as well as a reference for practitioners who want to identify the kinds of products needed in order to utilize video databases Video Database Systems Issues Products and Applications covers concepts products and applications It is written at a level which is less detailed than that normally found in textbooks but more in depth than that normally written in trade press or professional reference books Thus it seeks to serve both an academic and industrial audience by providing a single source of information about the research issues in the field and the state of the art of practice

Pen-and-Paper User Interfaces Jürgen Steimle,2012-01-05 Even at the beginning of the 21st century we are far from becoming paperless Pen and paper is still the only truly ubiquitous information processing technology Pen and paper user interfaces bridge the gap between paper and the digital world Rather than replacing paper with electronic media they seamlessly integrate both worlds in a hybrid user interface Classical paper documents become interactive This opens up a huge field of novel computer applications at our workplaces and in our homes This book provides readers with a broad and extensive overview of the field so as to provide a full and up to date picture of pen and paper computing It covers the underlying technologies reviews the variety of modern interface concepts and discusses future directions of pen and paper computing Based on the author s award winning dissertation the book also provides the first theoretical interaction model of pen and paper user interfaces and an integrated set of interaction techniques for knowledge workers The model proposes a construction set of core interactions that are helpful in designing solutions that address the diversity of pen and paper environments The interaction techniques concrete instantiations of the model provide innovative support for working with printed and digital documents They integrate well established paper based practices with concepts derived from hypertext and social media Researchers practitioners who are considering deploying pen and paper user interfaces in real world projects and interested readers from other research disciplines will find the book an invaluable reference source Also it provides an introduction to pen and paper computing for the academic curriculum The present book was overdue a thorough concise and well organized compendium of marriages between paper based and electronic documents Max M hlh user Technische Universit tDarmstadt Everyone interested in how to design for real world activities would profit from reading this book James D Hollan University of California San Diego

Elements of Hypermedia Design: Techniques for Navigation & Visualization in Cyberspace Peter Gloor,2013-11-11 The hypermedia authoring process has been vividly described in a special issue of the Economist as a combination of writing a book a play a film and a radio or television show A hypermedia document combines all these elements and adds some of its own The author s first job

is to structure and explain all of the information. The author then must distill the information into brief descriptive nodes. Each node has to contain a list of the ingredients and instructions on how the ingredients are mixed together to the greatest advantage. The structure of the material provided is translated into an architectural metaphor of some kind. Much of the designer's work is the creation of this imaginary space. Then the designers must chart the details of what to animate, what to film, who to interview, and how to arrange the information in the space to be built. Eco95a

This book presents guidelines, tools, and techniques for prospective authors such that they can design better hypermedia documents and applications. It surveys the different techniques used to organize search and structure information in a large information system. It then describes the algorithms used to locate, reorganize, and link data to enable navigation and retrieval. It looks in detail at the creation and presentation of certain types of visual information, namely algorithm animations. It introduces new mechanisms for editing audio and video data streams.
