Acoustic Analysis of Speech of Stutterers Manjunath Narra, Nuggahalli Puttarevaiah Nataraja, 2012-07 Adaptation refers to the decline in stuttering frequency that accompanies consecutive oral readings of the same material Only few studies have been carried out on adaptation effect in stutterers and no such studies in Indian context have been attempted A standard Kannada passage was read five times by twenty four male stutterers in the age range of 14 to 30 years These speech samples were analyzed to extract temporal and spectral parameters The results of the study showed that 87.5% stutterers showed adaptation effect and mean percentage of

adaptation noted was 47.51%. Significant differences were noted for vowel duration, word duration, articulation rate, burst duration, speaking fundamental frequency, and first formant frequency between fluent words in reading 1 and 5. Acoustics of American English Speech Joseph P. Olive, Alice Greenwood, John Coleman, 1993-05-21. This book presents the most contemporary and comprehensive description of the acoustics of the sounds used in American English. Intended to serve as an introductory text for students and professionals interested in acoustic phonetics, linguistics, physics, electrical engineering, and computer science, the authors bring to the subject the points of view of both linguistics and physics. The book uses numerous examples of acoustic spectrograms to show the continuities and variability of natural speech. The book begins by introducing the basic concepts of phonetics, phonology, and linguistics to readers whose background is in physics or engineering, and introducing the physics of sound generation and analysis for speech scientists and linguists. The authors then use the tools developed in the first part to examine the characteristics of individual phonemes as well as the changes introduced when individual sounds are combined in speech. Modern applications of speech acoustics, especially speech synthesis and recognition, are also discussed. Acoustic Analysis of Pathologies Amy Neustein, Hemant A. Patil, 2020-08-10. This book provides the reader with empirical findings on innovative signal processing approaches to detecting pathologies in infant cries by comparing new technological approaches to standard ones. The contributors examine novel approaches to machine adaptation to dysarthric speech. **Phonetic-acoustic Analysis of Polish Speech Sounds** Ryszard Patryń, 1987. **Signal and Acoustic Modeling for Speech and Communication Disorders** Hemant A. Patil, Amy Neustein, Manisha Kulshreshtha, 2018-12-17.
