

How Acoustic Imaging works?

When a leak occurs, the gas forms a turbulent flow near the leak and radiates sound waves.

The 128 microphone array of the Metravi AI-09 Acoustic Imager collects the sound signal, including the location information of the sound source.

The software performs various operations on the sound wave to obtain the data of sound source distribution.

The imaging results are observed, the leakage points are locked, and the severity of solution is evaluated
