Acta Numerica 1997: Volume 6 Arieh Iserles, 2011-08-11 Acta Numerica surveys annually the most important developments in numerical analysis The subjects and authors chosen by a distinguished international panel provide a survey of articles outstanding in their quality and breadth This volume includes articles on multivariate integration numerical analysis of semiconductor devices fast transforms in applied mathematics complexity issues in numerical analysis *Acta numerica 1997*, 1997

Topics in Algebraic Geometry and Geometric Modeling Ron Goldman, Rimvydas Krasauskas, 2003 Algebraic geometry and geometric modeling both deal with curves and surfaces generated by polynomial equations Algebraic geometry investigates the theoretical properties of polynomial curves and surfaces geometric modeling uses polynomial piecewise polynomial and rational curves and surfaces to build computer models of mechanical components and assemblies for industrial design and manufacture The NSF sponsored the four day Vilnius Workshop on Algebraic Geometry and Geometric Modeling which brought together some of the top experts in the two research communities to examine a wide range of topics of interest to both fields This volume is an outgrowth of that workshop Included are surveys tutorials and research papers In addition the editors have included a translation of Minding's 1841 paper On the determination of the degree of an equations obtained by elimination which foreshadows the modern application of mixed volumes in algebraic geometry The volume is suitable for mathematicians computer scientists and engineers interested in applications of algebraic geometry to geometric modeling *75 Years of Mathematics of Computation* Susanne C. Brenner, Igor E. Shparlinski, Chi-Wang Shu, Daniel Szyld, 2020-07-29 The year 2018 marked the 75th anniversary of the founding of Mathematics of Computation one of the four primary research journals published by the American Mathematical Society and the oldest research journal devoted to computational mathematics To celebrate this milestone the symposium Celebrating 75 Years of Mathematics of Computation was held from November 1-3 2018 at the Institute for Computational and Experimental Research in Mathematics ICERM Providence Rhode Island The sixteen papers in this volume written by the symposium speakers and editors of the journal include both survey articles and new contributions On the discrete side there are four papers covering topics in computational number theory and computational algebra On the continuous side there are twelve papers covering topics in machine learning high dimensional approximations nonlocal and fractional elliptic problems gradient flows hyperbolic conservation laws Maxwell's equations Stokes's equations a posteriori error estimation and iterative methods Together they provide a snapshot of significant achievements in the past quarter century in computational mathematics and also in important current trends

Enumath 97 - Proceedings Of The Second European Conference On Numerical Mathematics And Advanced Applications Hans Georg Bock, Guido Kanschat, Rolf Rannacher, Franco Brezzi, Roland Glowinski, Yuri A Kuznetsov, Jacques Periaux, 1998-11-06 The ENUMATH conferences were established in 1995 in order to provide a forum for discussion on recent topics of numerical mathematics They seek to bring together leading

experts and young scientists with special emphasis on contributions from Europe In the second ENUMATH conference in 1997 recent results and new trends in the analysis of numerical algorithms as well as their application to challenging scientific and industrial problems were discussed Apart from theoretical aspects a major part of the conference was devoted to numerical methods in interdisciplinary applications The topics covered in this proceedings include higher order finite element methods non matching grids least squares methods for partial differential equations multiscale analysis boundary element method optimization in partial differential equations solid mechanics microstructures computational fluid dynamics computational electrodynamics and semiconductors

Linear Integral Equations Rainer Kress,2013-12-04 This book combines theory applications and numerical methods and covers each of these fields with the same weight In order to make the book accessible to mathematicians physicists and engineers alike the author has made it as self contained as possible requiring only a solid foundation in differential and integral calculus The functional analysis which is necessary for an adequate treatment of the theory and the numerical solution of integral equations is developed within the book itself Problems are included at the end of each chapter For this third edition in order to make the introduction to the basic functional analytic tools more complete the Hahn Banach extension theorem and the Banach open mapping theorem are now included in the text The treatment of boundary value problems in potential theory has been extended by a more complete discussion of integral equations of the first kind in the classical Holder space setting and of both integral equations of the first and second kind in the contemporary Sobolev space setting In the numerical solution part of the book the author included a new collocation method for two dimensional hypersingular boundary integral equations and a collocation method for the three dimensional Lippmann Schwinger equation The final chapter of the book on inverse boundary value problems for the Laplace equation has been largely rewritten with special attention to the trilogy of decomposition iterative and sampling methods Reviews of earlier editions This book is an excellent introductory text for students scientists and engineers who want to learn the basic theory of linear integral equations and their numerical solution Math Reviews 2000 This is a good introductory text book on linear integral equations It contains almost all the topics necessary for a student The presentation of the subject matter is lucid clear and in the proper modern framework without being too abstract ZbMath 1999
