Acting Under Uncertainty Multidisciplinary Conceptions:

Acting under Uncertainty George M. von Furstenberg, 2013-03-09 Uncertainty could be associated with wisdom enterprise and discovery In ordinary speech however it has mostly negative connotations There is fear of the unknown and ignorance is bliss there are maxims to the effect that what you don't know doesn't hurt you or bother you in several languages This volume suggests that we need be bothered by the excessive confidence with which scientists particularly social scientists present some of their conclusions and overstate their range of application Otherwise many of the questions that should be raised about all the major uncertainties attending a particular issue routinely may continue to be thwarted or suppressed Down playing uncertainty does not lead to more responsible or surer action it sidetracks research agendas and leaves the decision makers exposed to nasty surprise This volume demonstrates that recognizing the many forms of uncertainty that enter into the development of any particular subject matter is a precondition for more responsible choice and deeper knowledge Our purpose is to contribute to a broader appreciation of uncertainty than regularly accorded in any of the numerous disciplines represented here The seventeenth century French philosopher Descartes quoted in this volume wrote that whoever is searching after truth must once in his life doubt all things insofar as this is possible White areas left on maps of the world in past centuries were a much more productive challenge than marking the end of the known world with the pillars of Hercules

to receive incomplete information about uncertainty They have become used to single valued deterministic forecasts e g the high temperature will be 70 degrees Farenheit 9 days from now and applied their own experience in determining how much confidence to place in the forecast Most forecast products from the public and private sectors including those from the National Oceanographic and Atmospheric Administration s National Weather Service continue this deterministic legacy Fortunately the National Weather Service and others in the prediction community have recognized the need to view uncertainty as a fundamental part of forecasts By partnering with other segments of the community to understand user needs generate relevant and rich informational products and utilize effective communication vehicles the National Weather Service can take a leading role in the transition to widespread effective incorporation of uncertainty information into predictions Completing the Forecast makes recommendations to the National Weather Service and the broader prediction community on how to make this transition
