INTRODUCTION OF INTERNET

1. What is the internet?

Internet is an interconnection between several computers of different type belonging to various networks across the word. It is a network of networks. Millions of people use the internet to search and share information and idea etc. It has grown into an important infrastructure supporting a wide-spread, multi-disciplinary community. This community now consists of students, scientists and researchers, large corporations, non-profit organizations, government agencies, and individual consumers.

The internet is an immensely complex combination of thousands of technologies and dozens of services used by millions of people around the world each day figure 1.1 shows a web of computers which is laid around the globe. The internet links thousands of computer networks. Every network and every computer in these networks exchange information according to certain rules called protocols. These different computers and networks are united with common thread of two protocols, i.e., internet protocol (IP) and transmission control protocol (TCP).
