

Know Your Cerebrovascular Diseases

An **ischemic stroke** occurs when there is not enough blood flow to the brain due to a narrow or blocked artery.

Examples include:

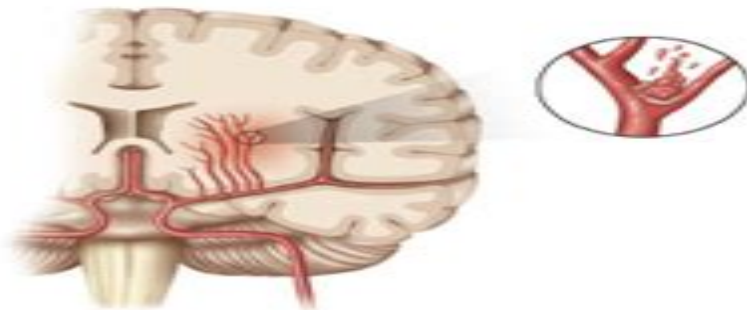

- **Carotid stenosis or carotid occlusion:** Blocked or narrowed carotid artery (a main artery in the neck supplying the brain)
- **Intracranial stenosis or intracranial occlusion:** Blocked or narrowed blood vessels inside the skull or brain

A **brain hemorrhage or hemorrhagic stroke** is bleeding in the brain from abnormal or fragile blood vessels.

Examples include:

- **Brain aneurysm:** A weakness or bulge in the wall of a blood vessel. It can grow or burst.

- **Brain cavernous malformation:** A low flow vascular malformation. It can bleed slowly or grow. It can also cause seizures.
- **Brain vascular malformation:** There are several types:

1. **Arteriovenous malformation (AVM):** A tangle of abnormal and fragile connections between arteries and veins in the brain. It causes abnormally high blood flow that can bleed into the brain and/or cause seizures.
2. **Dural arteriovenous fistula:** Similar to an AVM, but the abnormal artery is in the lining (dura) of the brain.
3. **Carotid-cavernous fistula:** Like an AVM, but the abnormal connection is between the carotid artery (and/or its branches) and the cavernous sinus (a major collection of brain veins behind the eye).
