Controversies in Acute Pancreatitis L. F. Hollender,2012-12-06 The first complete general study of acute necrotizing hemorrhagic pancreatitis was made in 1889 by Reginald Fitz If we survey the therapeutic evolution of this severe illness we may briefly summarize it into three periods a resolutely surgical treatment from approximately 1880 to 1938 b much more conservative treatment from 1938 to 1963 and c a return to surgery from 1963 onward Hoffmann in 1911 was probably the first to advocate the removal of the necrotic portion of the pancreas In 1933 Okinczyc wrote The operative indications are not a matter for discussion emergency surgery must be quick to manage the patient s poor resistance So go right to the target expose drain and hope Leriche and Arnaud more ingenious said The aim of the operation is to avoid diffusion of the pan

creatic juice into the abdominal cavity and limit the harmful effects of what remains in situ With the progress in intensive care techniques the conservatives emphasizing the poor results of surgery had no difficulty in imposing their point of view Subsequently in 1963 a new period began with the first successful emergency pancreatoduodenectomy performed by Watts If nowadays surgery for the secondary stage of necrosis or abscesses is generally accepted emergency surgery still remains questionable even if not systematically refused Many surgeons perform it under three conditions the worsening of the patient's general state despite medical treatment a dubious diagnosis and a biliary etiology **The Pancreas** Hans G.
