Cooperative OFDM Underwater Acoustic Communications Xilin Cheng, Liuqing Yang, Xiang Cheng, 2016-06-03 Following underwater acoustic channel modeling, this book investigates the relationship between coherence time and transmission distances. It considers the power allocation issues of two typical transmission scenarios: namely, short range transmission and medium long range transmission. For the former scenario, an adaptive system is developed based on instantaneous channel state information. The primary focus is on cooperative dual-hop orthogonal frequency division multiplexing (OFDM). This book includes the decomposed fountain codes designed to enable reliable communications with higher energy efficiency. It covers the Doppler Effect, which improves packet transmission reliability for effective low-complexity mirror mapping based inter-carrier interference cancellation.
