**Acoustical Holography A.**  
Metherell, 1995-12-31 Only a space limitation of 115 seats prevented this First International Symposium on Acoustical Holography from having an attendance of over 250 Unfortunately the size of the auditorium of the Douglas Advanced Research Laboratories required that attendance be by invitation only and many deserving and interested scientists could not be present This volume presents the proceedings of the symposium and hopefully will help compensate those individuals who were unable to attend The symposium itself consisted of sixteen formal papers The seven teenth by Dr P Greguss was not received in time to be read but is included in these proceedings The presence of Professor Dennis Gabor considerably enhanced the informal sessions which frequently became as spirited as one might expect in a new field Dr H M A El Sum a consultant to the Douglas Advanced Research Laboratories and a pioneer in the field of holography set the stage with the first paper He provided a general introduction to the physical principles and practical methods involved in optical and acoustical holography His paper also included a summary of various specific techniques currently used in sound holography with the advantages disadvantages and limitations involved for each approach

**Echocardiology** C.T. Lancée, 2012-12-06 This Symposium is the third of a series of scientific meetings in the field of echocardiology held at the Erasmus University Rotterdam The series was initiated by Klaas Born who organized the first two meetings with great success These followed the procedure of two days of parallel sessions with invited speakers only This time we decided to broaden the basis of the meeting and have a three day program of parallel sessions combining invited papers free communications and posters We decided however to maintain one of the most striking features of the last meeting having the complete proceedings available at the time of the meeting We confronted the authors to be with a very tight schedule in order to make the book a true reflection of the state of the art in echocardiology As a result editing time was also very limited and neither terminology nor units have been completely standardized This book has three main parts The first and largest

part consists of contributions on echocardiology in adults and is divided into four sections The first section is a general survey of various applications whereas the remaining three centre round specific applications i e ischemic disease left ventricular function and cardiac valves respectively The second part contains applications in pediatric cardiology due to the wide variety of topics covered no particular subdivision has been made The last part of the book is devoted to

**Acoustical Holography** A. Metherell,2012-12-06 This volume presents the proceedings of the Second International Symposium on Acoustical Holography which was held at the Douglas Advanced Research Laboratories on 6 and 7 March 1969 fifteen months after the first symposium Space was limited to about 110 seats with representatives from nine countries attending These countries included Canada England France Japan Mexico Scotland Sweden Switzerland and the United States The symposium consisted of 21 formal papers The twenty second by Dr U Fehr was not read but is included in these proceedings The manuscript of the interesting paper on acoustic propagation in a turbulent medium which was read by Dr O K Mawardi was not received in time for publication in these proceedings and we look forward to its publication perhaps at a later date in the open literature In addition to the formal papers there were three informal presentations at the end of the meeting which were given by Dr A Lohmann by L A Cram and K O Rossiter and by T S Graham which are also included in these proceedings At the end of the formal presentations Dr Lewis Larmore summarized the symposium and discussed some of the highlights For the symposium summary and a summary of these proceedings the reader is referred to Chapter 1

**Acoustical Holography** Glen Wade,1972-12 The latest progress in acoustical holography and related research areas generally involving imaging by means of acoustic waves was discussed and treated in depth at the Fourth International Symposium on Acoustical

Holography held in Santa Barbara California on April 10 12 1972 This volume contains the proceedings of that symposium As the papers presented here indicate a number of startling advances have been realized in the state of the art since publication of Volume 3 of Acoustical Holography Progress has been particularly impressive in the field of acoustical imaging The Fourth International Symposium represents something of a landmark conference in this respect The scope of this volume is substantially broader than the term acoustical holography usually implies and encompasses the whole area of visualization detection and recording of sound fields whether with long wavelengths microwaves or with extremely short sound wavelengths The 37 symposium papers appear here each as a separate chapter In general the work reported deals mainly with experimental and theoretical developments in the above areas This work has significant practical potential use in terms of seismic sensing under water imaging non destructive testing real time acoustic microscopy and medical diagnosis

Metherell, 1971-03-01 This volume presents the proceedings of the Third International Symposium on Acoustical Holography which was held at the Newporter Inn Newport Beach on 29 31 July 1970 The symposium was sponsored by the Douglas Advanced Research Laboratories McDonnell Douglas Corporation and the Acoustical Society of America Twenty papers were presented and these each appear as a chapter in this volume The chapters are grouped into five sections The sections are I Medical and Biological II Bragg Imaging III Nondestructive Testing IV Underwater and Long Wavelength and V Theory and Methods The reader is cautioned only to use the sectional titles as a rough guide For instance the reader interested in new methods should not just read section V since he will find a new liquid surface relief method described in chapter 10 in section III In an effort to reduce the time delay between the meeting and the publication date the publishers have produced this volume using the shoot from manuscript method instead of the more time consuming typesetting method that was used on the previous volumes As a result there may be differences in notation and definitions used for one chapter to another However this should not cause confusion since all symbols and definitions are stated in each chapter The editor wishes to thank the session chairmen Dr Vincent Salmon Stanford Research Institute Dr Isadore Rudnick University of California at Los Angeles Dr Lewis Larmore McDonnell Douglas Corporation Dr
