**Acquired Aphasia in Children** Isabel Pavão Martins, A. Castro-Caldas, Hugo R. van Dongen, Anne van Hout, 1991-07-31 One of the most fascinating problems in Behavioural Neurology is the question of the cerebral organization for language during childhood Acquired aphasia in children albeit rare is a unique circumstance in which to study the relations between language and the brain during cerebral maturation Its study further contributes to our understanding of the recovery processes and brain plasticity during childhood But while there is a great amount of information and experimental work on brain behaviour relationships in adult subjects the literature about the effects of focal brain lesions in children is both exiguous and scattered throughout scientific journals and books We felt it was time to organize a meeting where scientists in this field could compare their experiences and discuss ideas coming from different areas of research A workshop on Acquired Aphasia in Children was held in Sintra Portugal on September 13 15 1990 and attended by 44 participants from 13 different countries The atmosphere was relaxed and informal and the group was kept small to achieve this effect It was a very lively and pleasant meeting Some consensus was indeed arrived at concerning methodological problems definition of terms and guidelines for future research The main contributions are collected in this book which we hope will serve the scientific community as a reference work on Childhood Aphasia I P M A C C

Burnham, Peter L. Carlen, Paul A. Hwang, 2012-12-06 About 20% of people with epilepsy have seizures which are resistant to anticonvulsant medications. These drug resistant seizures are called intractable and the patients who have them about 1 in 500 of the general population present a major challenge to neurologists and epilepsy associations. The present volume describes the symptomatology of the major intractable syndromes, the most appropriate drugs for each, and the possibilities for surgical control. Research related to the causes and effects of unchecked seizures is presented and new directions in prevention and therapy are discussed. Medical Lectures and Aphorisms Samuel Jones Gee, 1902 *Behavioral Neurology and Neuropsychology, Second Edition* Todd E. Feinberg, Martha J. B. E. Murdoch, 2013-11-11 The stimulus for writing this book arose from the author's perception of a lack of available texts which adequately integrate the subjects of neuroanatomy and functional neurology with the practice of speech language pathology. This perception was gained from almost two decades of teaching in the areas of neuroanatomy and acquired neurological speech language disorders to speech pathology students initially at the South Australian College of Advanced Education and for the past five years at the University of Queensland. Although a plethora of excellent texts devoted specifically to each of the subjects of neuroanatomy, neurology, and aphasiology have been published, few have attempted to integrate these individual subject areas in such a way as to provide a more clear understanding of the neurological bases of clinically recognized forms of aphasia and motor speech disorders. In writing this text, I have attempted to provide a better balance between neuroanatomy, neurology, and speech language pathology. Relevant areas of neuroanatomy and neurology are introduced and discussed in the context of specific speech and language disorders. In this way, I have aimed at providing a better link between the relevant neuroanatomical and neurological knowledge on the one hand and specific neurologically based communication disorders on the other, in order to enhance the reader's understanding of the origins, course, and prognosis of these disorders. Of course, the writing of any book requires the support and encouragement of other people. This text was no exception.
