Across The Universe

Nikolai Mikhaïlovich Przheval'skii

Across The Universe:

Quantum Leap: From Dirac And Feynman, Across The Universe, To Human Body And Mind Vladimir G Ivancevic, Tijana T Ivancevic, 2008-10-09 This is a unique 21st century monograph that reveals a basic yet deep understanding of the universe as well as the human mind and body all from the perspective of quantum mechanics and quantum field theory This book starts with both non mathematical and mathematical preliminaries It presents the basics of both non relativistic and relativistic quantum mechanics and introduces Feynman path integrals and their application to quantum fields and string theory as well as some non quantum applications It then describes the quantum universe in the form of loop quantum gravity and quantum cosmology Lastly the book turns to the human body and mind applying quantum theory to electro muscular stimulation and consciousness It can be used as a graduate or advanced undergraduate textbook for a two semester course in quantum physics and its modern applications Some parts of the book can also be used by engineers biologists psychologists and computer scientists as well as applied mathematicians both in industry and academia

Parallel Worlds: Evolution Of Life Across The Cosmos Wallace Arthur, 2024-12-27 Humanity is fast approaching the point of being able to answer the age old question Are we alone in the cosmos The answer will almost certainly turn out to be no This is virtually guaranteed by two discoveries made in the last hundred years or so that the Milky Way is just one of countless galaxies and that the number of planets beyond our solar system exoplanets is vast But what is extraterrestrial life actually like What kinds of creatures roam the surfaces of alien planets or swim in their seas Are they typically in the genre of life as we know it or are they characterized by exotic forms and as yet undiscovered metabolism In Parallel Worlds Wallace Arthur argues that we should expect to find creatures that are similar in broad terms to those of Earth This can be anticipated because the environments of habitable planets have many parallel features so Darwinian natural selection should work in parallel ways producing broadly parallel trees of life This book takes the form of a step by step argument in favour of the hypothesis that there are multiple worlds inhabited by life forms that are broadly parallel to those of our home planet Like all good hypotheses it s testable The testing won t be easy and it isn t imminent but it will happen eventually providing humanity lasts for long enough

Wham! Teaching with Graphic Novels Across the Curriculum William G. Brozo, Gary Moorman, Carla Meyer, 2014 Graphic novels are an excellent medium to motivate today s youth to become independent learners and thinkers This practical guide shows secondary school teachers how to incorporate graphic novels into content area instruction as a tool for meeting the needs of diverse learners and achieving the goals of the Common Core State Standards The authors provide instructional guidelines with classroom examples that demonstrate how graphic novels can be used to expand content knowledge and literacy in science social studies math and English language arts Teachers will appreciate the book s specific suggestions for selecting graphic novels and for employing responsive practices that will build students reading writing speaking listening and media competencies The range and complexity of graphic novels being published right now is simply amazing to me They are part

of what should be a balanced array of texts that all can read enjoy and learn from In this volume the authors point to this proliferation as well as the educative potential of graphic novels After reading its pages I feel others will agree with me that they have done an excellent job pointing out how graphic novel creators such as Jim Ottaviani and Larry Gonick communicate much about history science and mathematics while also making connections to comprehension and thinking skills that accompany both literacy and content specific learning From the Foreword by Stergios Botzakis assistant professor of adolescent literacy in the Theory and Practice in Teacher Education Department at The University of Tennessee Knoxville The authors have set forth on a task I feel long is overdue connecting the literacy potential of graphic novels to the content areas This book is a wonderful contribution to the field of content area literacy studies Michael D Boatright assistant professor Department of English Western Carolina University Book Features Advice for selecting and evaluating graphic novels Teaching strategies for each of the four major content domains Guidance for aligning instruction with the Common Core State Standards A list of educational graphic novels organized by content area Study group questions And more William G Brozo is a professor of literacy in the Graduate School of Education at George Mason University in Fairfax Virginia and author of RTI and the Adolescent Reader Gary Moorman is professor emeritus at Appalachian State University in Boone North Carolina Carla K Meyer is an assistant professor in the Reading Education and Special Education Department at Appalachian State University

Frontiers In Entropy Across The Disciplines - Panorama Of Entropy: Theory, Computation, And Applications M Zuhair Nashed, Willi Freeden, 2022-08-30 Frontiers in Entropy Across the Disciplines presents a panorama of entropy emphasizing mathematical theory physical and scientific significance computational methods and applications in mathematics physics statistics engineering biomedical signals and signal processing In the last century classical concepts of entropy were introduced in the areas of thermodynamics information theory probability theory statistics dynamical systems and ergodic theory During the past 50 years dozens of new concepts of entropy have been introduced and studied in many disciplines This volume captures significant developments in this arena It features expository review and research papers by distinguished mathematicians and scientists from many disciplines The level of mathematics ranges from intermediate level to research level Each chapter contains a comprehensive list of references Topics include entropy and society entropy and time Souriau entropy on symplectic model of statistical physics new definitions of entropy geometric theory of heat and information maximum entropy in Bayesian networks maximum entropy methods entropy analysis of biomedical signals review and comparison of methods spectral entropy and its application to video coding and speech coding a comprehensive review of 50 years of entropy in dynamics a comprehensive review on entropy entropy like quantities and applications topological entropy of multimodal maps entropy production in complex systems entropy production and convergence to equilibrium reversibility and irreversibility in entropy nonequilibrium entropy index of various entropy entropy and the greatest blunder ever
