Action In Perception Representation And Mind:

Action in Perception Alva Noë, 2006-01-20 Perception is not something that happens to us or in us writes Alva Noë It is something we do In Action in Perception Noë argues that perception and perceptual consciousness depend on capacities for action and thought that perception is a kind of thoughtful activity Touch not vision should be our model for perception Perception is not a process in the brain but a kind of skillful activity of the body as a whole We enact our perceptual experience To perceive according to this enactive approach to perception is not merely to have sensations it is to have sensations that we understand In Action in Perception Noë investigates the forms this understanding can take He begins by arguing on both phenomenological and empirical grounds that the content of perception is not like the content of a picture the world is not given to consciousness all at once but is gained gradually by active inquiry and exploration Noë then argues that perceptual experience acquires content thanks to our possession and exercise of practical bodily knowledge and examines among other topics the problems posed by spatial content and the experience of color He considers the perspectival aspect of the representational content of experience and assesses the place of thought and understanding in experience Finally he explores the implications of the enactive approach for our understanding of the neuroscience of perception

Imitation and Social Learning in Robots, Humans and Animals Christopher L. Nehaniv, Kerstin Dautenhahn, 2009-04-09 Mechanisms of imitation and social matching play a fundamental role in development communication interaction learning and culture Their investigation in different agents animals humans and robots has significantly influenced our understanding of the nature and origins of social intelligence Whilst such issues have traditionally been studied in areas such as psychology biology and ethnology it has become increasingly recognised that a constructive approach towards imitation and social learning via the synthesis of artificial agents can provide important insights into mechanisms and create artefacts that can be instructed and taught by imitation demonstration and social interaction rather than by explicit programming This book studies increasingly sophisticated models and mechanisms of social matching behaviour and marks an important step towards the development of an interdisciplinary research field consolidating and providing a valuable reference for the increasing number of researchers in the field of imitation and social learning in robots humans and animals

Phenomenal Consciousness and Mind-Body Problem V.N. Misra, 2019-07-05 About the Book The problem of explanatory gap in the phenomenal consciousness has risen in the Western philosophy mainly because the consciousness itself and its manifestations or reflections are treated separately Whereas according to the Vedānta school of India the phenomenal consciousness is merely manifestations of self consciousness which is embodied in the human beings In this approach the phenomenal consciousness and self consciousness are one and the same thing because the former depends upon the latter Hence there is no explanatory gap in the phenomenal consciousness Similar is the case with the mind body problem which exists in the Western philosophy mainly

because the mind is treated as synonymous with consciousness This book solves the above problems on the basis of the Indian philosophy and existential philosophy of Jean Paul Sartre In both the philosophies there is no explanatory gap in the phenomenal consciousness and the mind body problem About the Author V N Misra PhD retired from Indian Economic Service IES has worked as Economic Advisor in different ministries of Government of India He had several consultancy assignments with the ADB FAO World Bank and IFPRI Dr Misra has also to his credit more than forty research papers published in reputed journals in the field of agricultural policy and development labour employment rural poverty etc He has also co authored with V S Vyas and D S Tyagi a book Significance of New Technology for Small Farmers Dr Misra s study on Terms of Trade is a published work He has now shifted his interest from economics to philosophy and has recently published two books Science of Consciousness A Synthesis of Ved nta and Buddhism and Sa s ra and Nirv a A Unifying Vision
