## **Active Learning For Ones:**

Active Learning for Ones Debby Cryer, 1987 This publication has over 300 activities for children 12-24 months old. The activities are easy to read and do with one child or a small group. **Addison-Wesley Active Learning Series: Active learning for ones** Debby Cryer, 1987 A Reinforcement One-Shot Active Learning Approach for Aircraft Type Recognition HONGLAN HUANG, YANGHE FENG, JINCAI HUANG, JIARUI ZHANG, LI CHEN, Target recognition is an important aspect of air traffic management but the study on automatic aircraft identification is still in the exploratory stage. Rapid aircraft processing and accurate aircraft type recognition remain challenging tasks due to the high speed movement of the aircraft against complex backgrounds. Active learning as a promising research topic of machine learning in recent decades can use less labeled data to obtain the same model accuracy as supervised learning which greatly reduces the cost of labeling a dataset. The Active Learning Classroom: Strategies for Practical Educators Jason Creekmore, Shannon Deaton, 2015-09-22 The goal of the book is simple: To improve student achievement by helping teachers implement active learning strategies in the classroom. To begin, consider the following two questions in relation to your own classroom: 1. Are your students actively engaged throughout the entirety of your daily lessons? 2. Are students meeting your highest expectations regarding achievement? If you answered no to either or both of these questions, you are not alone. Classroom teachers at all levels are challenged with low student engagement resulting in low student achievement. Numerous studies indicate a positive correlation between engagement and achievement. For this reason, the teacher is the most important component of the learning process as he/she is ultimately responsible for creating an atmosphere conducive to student achievement. Active Learning has proven to be one of the most important tools for engaging students, promoting skills in motivation, higher order thinking, communication, creative thinking, and problem solving. Most teachers agree that these skills are essential for increasing student achievement; however, these skills are difficult to foster in the traditional sage-on-a-stage model. Educators must learn to adopt a new guide on the side teaching paradigm whereby traditional instruction is supplemented by active learning strategies. **Active Learning in Higher Education** Wendy Garnham, Isobel Gowers, 2023-02-09 This insightful new book explores perspectives on active learning as creative discovery, conceptualisations of active learning spaces and transitions from theoretical approaches to active learning practice. It draws on the experiences of academics, learning technologists, and clinical practitioners and invites the reader to think about our conceptualisations of active learning and to move beyond mere demonstrations of its effectiveness. With contributions from academics and NHS practitioners, this publication will make a unique contribution to the literature that increasingly points to the value, impact, and reach of active learning pedagogy. It importantly addresses the need for active learning, highlighting some of the many theoretical issues that active learning raises through three broad lenses: The idea of active learning as creative play; The use of theoretical models in designing active learning; The transition from active learning theory to practice. Aimed at anyone with an interest in active

learning as a pedagogical approach Active Learning in Higher Education provides a starting point for further discussion and development of pedagogical theory becoming an essential read for educators school leaders as well as researchers in the field of education

**Handbook of Research on Active Learning and Student Engagement in Higher Education** Keengwe, Jared, 2022-06-10 Active learning occurs when a learning task can be related in a non arbitrary manner to what the learner already knows and when there is a personal recognition of the links between concepts The most important element of active learning is not so much in how information is presented but how new information is integrated into an existing knowledge base In order to successfully implement active learning into higher education its effect on student engagement must be studied and considered The Handbook of Research on Active Learning and Student Engagement in Higher Education focuses on assessing the effectiveness of active learning and constructivist teaching to promote student engagement and provides a wide range of strategies and frameworks to help educators and other practitioners examine the benefits challenges and opportunities for using active learning approaches to maximize student learning Covering topics such as online learning environments and engagement approaches this major reference work is ideal for academicians practitioners researchers librarians industry professionals educators and students
