Biodeterioration Of Stone In Tropical Environments An Overview:

Biodeterioration of Stone in Tropical Environments Rakesh Kumar, Anuradha V. Kumar, 1999 A serious challenge for professionals involved in the conservation of cultural heritage sites in tropical environments is the biodeterioration of stone. This volume discusses the types and causes of stone biodeterioration in hot and humid climates, preventative and remedial methods, selection of chemical treatments, the status of current research, and areas for further investigation. **Advanced Materials for the Conservation of Stone** Majid Hosseini, Ioannis Karapanagiotis, 2018-01-22 This book identifies novel advanced materials that can be utilized as protective agents for the preservation of stone. The innovative solutions to stone conservation presented here result in increased sustainability, reduced environmental impact, and increased social and economic benefits. It provides an overview of recent trends and progress in advanced materials applied to stone protection. It also explores the scientific principles behind these advanced materials and discusses their applications to different types of stone preservation efforts. Essential information, as well as knowledge on the availability and applicability of advanced nanostructured materials, is also provided, with focus placed on the practical aspects of stone protection. The book highlights an interdisciplinary effort regarding novel applications of nanostructured materials in the advancement of stone protection. It provides insight towards forthcoming developments in the field. Advanced nanostructured materials are designed and developed with the aim of being chemically, physically, and mechanically compatible with stone. Advanced materials for stone conservation that are characterized by several functional properties are considered in this book. These include the physico-chemical, protective, and morphological properties, ecotoxicity, and mechanisms of degradation. The authors present a thorough overview of cutting-edge discoveries, detailed information on recent technological developments, breakthroughs in novel nanomaterials, utilization strategies for applications in cultural heritage, and the current status and future outlook of the topic to address a wide range of scientific communities. Bioremediation Technology M H Fulekar, Bhawana Pathak, 2020-01-06 The book describes hazardous waste industries, sources of waste, generation, characterization, and treatment processes, methods, and techniques and technology to deal with the treated waste as per the prescribed standard. Advanced treatment based on the microbial remediation, plant-based decontamination, rhizoremediation, and nano-based remediation is also explained. Advances in treatment technology using biotechnological tools, bionanotechnology for removal of contaminants are described. This volume will help readers to develop biotechnological and nanotechnological approaches for the remediation of hazardous waste and the developed technology that can be transferred from laboratory to land and piloting to commercial scenarios. Prof M H Fulekar, a Professor and Joint Director, R D Centre of Research for Development, Parul University. Dr Bhawana Pathak is working as an Associate Professor and Dean in School of Environment and Sustainable Development, Central University of Gujarat. Analysis, Conservation, and Restoration of Tangible and Intangible Cultural Heritage Inglese, Carlo, Ippolito, Alfonso, 2018-10-12 Communities have witnessed a fundamental shift in the ways they interact with heritage sites Much of this change has been driven by the rapid democratization and widespread adoption of enabling technologies As expediency is embraced in the collection and analysis of data there may also be a certain amount of intimacy lost with both the tangible and intangible vestiges of the past Analysis Conservation and Restoration of Tangible and Intangible Cultural Heritage is a collection of innovative research on the quantitative methods and digital workflows transforming cultural heritage There is no contesting the value of advanced non destructive diagnostic imaging techniques for the analysis of heritage structures and objects Highlighting topics including 3D modeling conservation and digital surveying this book is ideally designed for conservation and preservation specialists archaeologists anthropologists historians academicians and students seeking current research on data driven evidence based decision making to improve intervention outcomes

Microbial Biotechnology Approaches to Monuments of Cultural Heritage Ajar Nath Yadav, Ali Asghar Rastegari, Vijai Kumar Gupta, Neelam Yadav, 2020-06-24 Our country's cultural legacy is one of the world's most diverse drawing millions of visitors every year to our convents and monuments and to our museums libraries concert halls and festivals In addition it is a dynamic trigger of economic activity and jobs Among the various scientific branches microbial biotechnology offers an innovative and precise approach to the complexity of problems that restorers face in their daily work This book discusses a range of topics including the biodiversity of microbial communities from various cultural heritage monuments microbial biotechnological cleaning techniques the role of bacterial fungal communities for the conservation of cultural heritage and microbial enzymes and their potential applications as bioremediation agents Written by internationally recognized experts and providing up to date and detailed insights into microbial biotechnology approaches to cultural heritage monuments the book is a valuable resource for biological scientists especially microbiologists microbial biotechnologists biochemists and microbial biotechnologists

Fungi in the Environment Geoffrey Gadd, Sarah C. Watkinson, Paul S. Dyer, 2007-04-12 Fungi are of fundamental importance in the terrestrial environment They have roles as

decomposers plant pathogens symbionts and in elemental cycles Fungi are often dominant and in soil can comprise the largest pool of biomass including other microorganisms and invertebrates They also play a role in maintenance of soil structure due to their filamentous growth habit and exopolymer production Despite their important roles in the biosphere fungi are frequently neglected within broader environmental and microbiological spheres Additionally mycological interests can be somewhat fragmented between traditional subject boundaries This multi disciplinary volume explores the roles and importance of fungi in the environment Particular emphasis is given to major research advances made in recent years as a result of molecular and genomic approaches and in cell imaging and biology Drawing together microbiologists mycologists and environmental scientists this work is a unique account of modern environmental mycology and a pivotal contribution to the field

Of Microbes and Art Orio Ciferri,Piero Tiano,Giorgio Mastromei,2000-06-30 Microbial defacement and degradation of artistic or historic artifacts is a worldwide problem affecting all countries regardless of their history geographical location or economic conditions This is the first comprehensive study of the role of microbial colonization on the degradation of different cultural artifacts from buildings to books wall paintings textiles sculptures and glass and of the investigations into the compounds utilized to control microbial invasion The book focuses on three main areas the identification of the microorganisms which cause structural damage methods to reduce or prevent microbial colonization and damage and the use of microorganisms for the protection and bioremediation of cultural artifacts

Biodeterioration of Stone Surfaces Larry St.Clair,Mark Seaward,2012-11-02 This is a timely volume in view of the considerable interest currently shown in the preservation of our cultural heritage and the extensive and growing literature on the subject Unfortunately the latter is to be found in a wide variety of published sources some aimed at a very specific readership and therefore not all that accessible to those who need this resource The present volume draws together a spectrum of biodeterioration work from across the world to provide an overview of the materials examined and the methodologies employed to elucidate the nature of the problems as well as an extensive and current bibliographical resource on lichen biodeterioration Biodeterioration of historical and culturally important stone substrata is a complex problem to be addressed Easy risk free solutions are simply not available to be dealt with by other than a wide range of expertise Successful resolution of this issue will inevitably require a multidisciplinary effort where biologists work in close cooperation with ecologists geologists geochemists crystallographers cultural property conservators archaeologists anthropologists and historians in order to recommend the most effective management scheme The advantage of this approach is obvious

multidisciplinary management teams with good leadership can ask more appropriate questions while developing much more thoughtful and informed decisions *Art and Archaeology Technical Abstracts* ,1999 *Materials Issues in Art and Archaeology IV* Pamela B. Vandiver,1995
