Memory Practices in the Sciences Geoffrey C. Bowker, 2008-02-15 How the way we hold knowledge about the past in books in file folders in databases affects the kind of stories we tell about the past The way we record knowledge and the web of technical formal and social practices that surrounds it inevitably affects the knowledge that we record The ways we hold knowledge about the past in handwritten manuscripts in printed books in file folders in databases shape the kind of stories we tell about that past In this lively and erudite look at the relation of our information infrastructures to our information Geoffrey Bowker examines how over the past two hundred years information technology has converged with the nature and production of scientific knowledge His story weaves a path between the social and political work of creating an explicit indexical memory for science the making of infrastructures and the variety of ways we continually reconfigure lose and regain the past At a time when memory is so cheap and its recording is so protean Bowker reminds us of the centrality of what and how we choose to forget In *Memory Practices in the Sciences* he looks at three memory epochs of the nineteenth twentieth and twenty first centuries and their particular reconstructions and reconfigurations of scientific knowledge The nineteenth century's central science geology mapped both the social and the natural world into a single time package despite apparent discontinuities as in a different way did mid twentieth century cybernetics Both Bowker argues packaged time in ways indexed by their information technologies to permit traffic between the social and natural worlds Today's sciences of biodiversity meanwhile database the world in a way that excludes certain spaces entities and times We use the tools of the present to look at the past says Bowker we project onto nature our modes of organizing our own affairs **Biodiversity**

Sustainable Use of Genetic Resources Under the Convention on Biological Diversity William Lesser, 1998 The Convention on Biological Diversity is a complex document particularly in those articles dealing with the ownership and use of genetic resources While only limited progress has been made in applying the Convention countries are nevertheless acting unilaterally on its placement of genetic resources as their sovereign right to exploit There is a need to review and synthesize all of the aspects of these issues and this book aims to fill that gap in the literature Its focus is the presentation of legal and economic issues regarding the sustainable use and transfer of genetic resources and associated technologies It also identifies specific steps that can be taken and their expected consequences Drawing particularly on Articles 8 9 15 16 18 and 19 of the Convention it will assist positive and timely action during this critical juncture in its application It will be invaluable for scientists policy makers and NGOs whether from the perspectives of economics or law or more applied fields such as biological conservation or plant breeding and biotechnology
