Young, New York Academy of Sciences, 2007-05-07 The reproductive system is composed of complex sub systems which are driven by sophisticated biochemical processes whereas their performance is controlled by the same physical laws that exist in any mechanical process on Earth e.g. Newton's laws Accordingly the understanding of any physiological phenomenon including the development of a pathologic condition requires comprehensive evaluation of the biophysical and biomechanical aspects of reproduction in concert with the biological and clinical features Several of the scientists from around the world who investigate the physical aspects of the reproductive system have contributed to the eight sessions resulting in this volume These reports encompass the following areas of inquiry non pregnant uterine peristalsis placental vasculature and blood flow myometrial contractility and calcium transport mechanics of the uterus and cervix in pregnancy mechanics of embryonic development penile mechanics and hemodynamics sperm propulsion and pelvic floor mechanics NOTE Annals volumes are available for sale as individual books or as a journal For information on institutional journal subscriptions please visit www.blackwellpublishing.com nyas ACADEMY MEMBERS Please contact the New York Academy of Sciences directly to place your order www.nyas.org Members of the New York Academy of Science receive full text access to the Annals online and
