**Crown Ethers and Phase Transfer Catalysis in Polymer Science** Lon Mathias, 2013-11-22 Phase transfer catalysis or interfacial catalysis is a synthetic technique involving transport of an organic or inorganic salt from a solid or aqueous phase into an organic liquid where reaction with an organic soluble substrate takes place Over the past 15 years there has been an enormous amount of effort invested in the development of this technique in organic synthesis Several books and numerous review articles have appeared summarizing applications in which low molecular weight catalysts are employed These generally include either crown ethers or onium salts of various kinds While the term phase transfer catalysis is relatively new the concept of using a phase transfer agent PTA is much older Both Schnell and Morgan employed such catalysts in synthesis of polymeric species in the early 1950 s Present developments are really extensions of these early applications It has only been within the last several years that the use of phase transfer processes have been employed in polymer synthesis and modification Similarly the use of polymer bound phase transfer agents is also a recent development These and related areas have nonetheless enjoyed explosive growth as measured by the number of publications and the variety of applications which have appeared Several reviews dealing with these 16 polymer related investigations have been published *Coordination Polymerization* Charles C. Price, 2013-03-09 Edwin J Vandenberg a long time researcher at the Research Center of Hercules Incorporated was the 1981 winner of the American Chemical Society Award in Polymer Chemistry sponsored by the Witco Chemical Corp Following is the citation of the accomplishments which led to this award In recognition of his pioneering research that advanced polymer science and that led to the discovery and development of isotactic polypropylene epichlorohydrin and propylene oxide elastomers new polymerization catalysts and the hydrogen method of controlling molecular weights of Ziegler polyolefins It was my pleasure to arrange a symposium to celebrate this award at the Atlanta Meeting of the American Chemical Society on March 30 1981 In considering the broad range of Vandenberg s contributions to polymer chemistry it was decided to choose the subject of Coordination Polymerization for the symposium This area is both one to which Vandenberg has made major contributions and one of great industrial and scientific interest Since

Vandenberg has been involved in coordination polymerization in both ring opening and a olefin type polymerizations both were covered in the symposium whose program follows

*Reaction Injection Molding and Fast Polymerization Reactions* Jiri E. Kresta, International Symposium on Reaction Injection Molding, American Chemical Society Division of Organic Coatings, 2012-12-06

The emergence of reaction injection molding RIM has been followed by the industry with mounting interest RIM technology has brought to polymer processing a new flexibility and savings in both energy and capital investment The new developments and the number of engineers and scientists working in RIM is growing at so fast a rate that there is need for sharing information on progress in this area This book is based on papers presented at the International Symposium on Reaction Injection Molding which was held in 1981 in Atlanta Georgia and was sponsored by the American Chemical Society Division of Organic Coatings and Plastics Chemistry The book is divided into four parts covering different areas of RIM development The first part is devoted to the future trends of RIM development in the United States and Japan The structure properties relationship and effects of annealing on properties of RIM elastomers are covered in the second part New non urethane polymers such as polyamides polyisocyanurates and polystyrene suitable for RIM processing are discussed in the third part In the last part the engineering and technological aspects of RIM such as glass reinforcement mixing flow and moldability are covered in detail Finally I would like to thank Mrs Iris Glebe for typing this book and for help with editing and K Zielinski for his assistance v vi
