Biometrics is a rapidly evolving field with applications ranging from accessing one s computer to gaining entry into a country The deployment of large scale biometric systems in both commercial and government applications has increased public awareness of this technology Recent years have seen significant growth in biometric research resulting in the development of innovative sensors new algorithms enhanced test methodologies and novel applications This book addresses this void by inviting some of the prominent researchers in Biometrics to contribute chapters describing the fundamentals as well as the latest innovations in their respective areas of expertise *Biometric Authentication* David Zhang,Anil K. Jain,2004-07 This book constitutes the refereed proceedings of the First International Conference on Biometric Authentication ICBA 2004 held in Hong Kong China in July 2004 The 104 revised full papers presented were carefully reviewed and selected from 157 submissions also included are summaries of 3 biometric competitions on fingerprint verification face authentication and signature verification The papers are organized in topical sections on face fingerprint iris signature speech biometric fusion and risk analysis and other biometric issues Imaging for Forensics and Security Ahmed Bouridane,2009-07-14 Imaging for Forensics and Security From Theory to Practice provides a detailed analysis of new imaging and pattern recognition techniques for the understanding and deployment of biometrics and forensic techniques as practical solutions to increase security It contains a collection of the recent advances in the technology ranging from theory design and implementation to performance evaluation of biometric and forensic systems This book also contains new methods such as the multiscale approach directional filter bank and wavelet maxima for the development of practical solutions to biometric problems The book introduces a new forensic system based on shoeprint imagery with advanced techniques for use in forensics applications It also presents the concept of protecting the originality of biometric images stored in databases against intentional and unintentional attacks and fraud detection data in order to further increase the security **Guide to Biometrics** Ruud M. Bolle,Jonathan H. Connell,Sharath Pankanti,Nalini K. Ratha,Andrew W. Senior,2013-06-29 Starting with fingerprints more than a hundred years ago there has been ongoing research in biometrics Within the last forty years face and speaker recognition have emerged as research topics However as recently as a decade ago biometrics itself did not exist as an independent field Each of the biometric related topics grew out of different disciplines For example the study of fingerprints came from forensics and pattern recognition speaker recognition evolved from signal processing the beginnings of face recognition were in computer vision and privacy concerns arose from the public policy arena One of the challenges of any new field is to state what the core ideas are that define the field in order to provide a research agenda for the field and

identify key research problems Biometrics has been grappling with this challenge since the late 1990s With the maturation of biometrics the separate biometrics areas are coalescing into the new discipline of biometrics The establishment of biometrics as a recognized field of inquiry allows the research community to identify problems that are common to biometrics in general It is this identification of common problems that will define biometrics as a field and allow for broad advancement
