Freitas, Simon H. Lavington, 2012-12-06 *Mining Very Large Databases with Parallel Processing* addresses the problem of large scale data mining. It is an interdisciplinary text describing advances in the integration of three computer science areas namely intelligent machine learning based data mining techniques, relational databases, and parallel processing. The basic idea is to use concepts and techniques of the latter two areas particularly parallel processing to speed up and scale up data mining algorithms. The book is divided into three parts. The first part presents a comprehensive review of intelligent data mining techniques such as rule induction, instance based learning, neural networks, and genetic algorithms. Likewise the second part presents a comprehensive review of parallel processing and parallel databases. Each of these parts includes an overview of commercially available state of the art tools. The third part deals with the application of parallel processing to data mining. The emphasis is on finding generic cost effective solutions for realistic data volumes. Two parallel computational environments are discussed the first excluding the use of commercial strength DBMS and the second using parallel DBMS servers. It is assumed that the reader has a knowledge roughly equivalent to a first degree BSc in accurate sciences so that s he is reasonably familiar with basic concepts of statistics and computer science. The primary audience for *Mining Very Large Databases with Parallel Processing* is industry data miners and practitioners in general who would like to apply intelligent data mining techniques to large amounts of data. The book will also be of interest to academic researchers and postgraduate students particularly database researchers interested in advanced intelligent database applications and artificial intelligence researchers interested in industrial real world applications of machine learning.
