   Biomorphic architecture Günther Feuerstein,2002   Building for Life Stephen R. Kellert,2012-09-26 Sustainable design has made great strides in recent years unfortunately it still falls short of fully integrating nature into our built environment Through a groundbreaking new paradigm of restorative environmental design award winning author Stephen R Kellert proposes a new architectural model of sustainability In Building For Life Kellert examines the fundamental interconnectedness of people and nature and how the loss of this connection results in a diminished quality of life This thoughtful new work illustrates how architects and designers can use simple methods to address our innate needs for contact with nature Through the use of natural lighting ventilation and materials as well as more unexpected methodologies the use of metaphor perspective enticement and symbol architects can greatly enhance our daily lives These design techniques foster intellectual development relaxation and physical and emotional well being In the works of architects like Frank Lloyd Wright Eero Saarinen Cesar Pelli Norman Foster and Michael Hopkins Kellert sees the success of these strategies and presents models for moving forward Ultimately Kellert views our fractured relationship with nature as a design problem rather than an unavoidable aspect of modern life and he proposes many practical and creative solutions for cultivating a more rewarding experience of nature in our built environment   Towards Users' Optimal and Pleasurable Experience in Smart Environments Mi Jeong Kim,Xiangyu Wang,Inhan Kim,2020-12-23 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin org about contact   **Neural Information Processing and VLSI** Bing J. Sheu,Joongho Choi,2012-12-06 Neural Information Processing and VLSI provides a unified treatment of this important subject for use in classrooms industry and research laboratories in order to develop advanced artificial and biologically inspired neural networks using compact analog and digital VLSI parallel processing techniques Neural Information Processing and VLSI systematically presents various neural network paradigms computing architectures and the associated electronic optical implementations using efficient VLSI design methodologies Conventional digital machines cannot perform computationally intensive tasks with satisfactory performance in such areas as intelligent perception including visual and auditory signal processing recognition understanding and logical reasoning where the human being and even a small living animal can do a superb job Recent research advances in artificial and biological neural networks have established an important foundation for high performance information processing with more efficient use of computing resources The secret lies in the design optimization at various levels of computing and communication of

intelligent machines Each neural network system consists of massively paralleled and distributed signal processors with every processor performing very simple operations thus consuming little power Large computational capabilities of these systems in the range of some hundred giga to several tera operations per second are derived from collectively parallel processing and efficient data routing through well structured interconnection networks Deep submicron very large scale integration VLSI technologies can integrate tens of millions of transistors in a single silicon chip for complex signal processing and information manipulation The book is suitable for those interested in efficient neurocomputing as well as those curious about neural network system applications It has beenespecially prepared for use as a text for advanced undergraduate and first year graduate students and is an excellent reference book for researchers and scientists working in the fields covered **Imaginary Cities** Darran Anderson,2017-04-06 How can we understand the infinite variety of cities Darran Anderson seems to exhaust all possibilities in this work of creative nonfiction Drawing inspiration from Marco Polo and Italo Calvino Anderson shows that we have much to learn about ourselves by looking not only at the cities we have built but also at the cities we have imagined Anderson draws on literature Gustav Meyrink Franz Kafka Jaroslav Hasek and James Joyce but he also looks at architectural writings and works by the likes of Bruno Taut and Walter Gropius Medieval travel memoirs from the Middle East mid twentieth century comic books Star Trek mythical lands such as Cockaigne and the works of Claude Debussy Anderson sees the visionary architecture dreamed up by architects artists philosophers writers and citizens as wedded to the egalitarian sense that cities are for everyone He proves that we must not be locked into the structures that exclude ordinary citizens that cities evolve and that we can have input As he says If a city can be imagined into being it can be re imagined as well Bionics Fouad Sabry,2024-12-09 1 Bionics Explores the core concepts blending biology and robotics for groundbreaking results 2 Biomedical engineering Examines the medical applications of bionic systems for human benefit 3 Biomimetics Discusses technology inspired by biological systems to solve complex problems 4 Bioinspired computing Analyzes computing techniques rooted in natural processes 5 Janine Benyus Profiles the biomimicry pioneer and her influence on bionic applications 6 Biorobotics Reviews robots mimicking biological functions for enhanced adaptability 7 Neuroprosthetics Explores advancements in robotic prosthetics for neural integration 8 Rahul Sarpeshkar Highlights this key figure s contributions to bionics and bioengineering 9 Biological engineering Examines the crossover of biology and engineering in robotics 10 Biomaterial Investigates materials derived from or inspired by biology 11 Biomimetic material Focuses on materials designed to mimic biological properties 12 Cyborg Looks at the merging of human biology with robotics for enhanced abilities 13 Bionic disambiguation Clarifies the terminology and scope of bionic in various fields 14 Biomimicry Institute Covers the organization s impact on bioinspired technologies 15 Werner Nachtigall Honors the researcher s foundational work in biomimetics 16 Bioinspired robotics Discusses robots inspired by biological movements and adaptations 17 Biomimetic architecture Reviews architecture influenced by natural forms and systems 18 Bioinspiration

Art and Science ,2003   *Frederick Kiesler* Shirley Haines-Cooke,2009 The material for this book has been taken from the 2006 thesis Frederick Kiesler TM s Art of This Century in New York 1942 1947 in the Context of the Twentieth Century Art Museum The prime objective was to establish why so few people remember Art of This Century which Kiesler designed for Peggy Guggenheim in 1942 and she ruthlessly closed in 1947 A second aim was to investigate why there has been so research carried out on the Gallery when it was acknowledged as a work of art in its own right at the time of opening Indeed in 2004 Thomas Krens the Guggenheim Foundation TM s director expressed concern that due to the lack of research it might slip into oblivion Such a statement raises questions as to why it has taken the Guggenheim Foundation over half a century to resurrect Art of This Century in the form of two exhibitions held in Frankfurt and Venice or instigate its own research The book opens with an historical account of the development of the modern art museum as well as an overview of Kiesler TM s life and multidisciplinary oeuvre His association with selected contemporary architectural theorists and architects is looked at to establish whether they had any influence on his eclectic thinking This is followed by a summary of Kiesler TM s manifesto On Correalism and Biotechnique A Definition of a New Approach to Building Design 1937 1939 The main body of the work is a detailed description of Art of This Century The notion that Kiesler TM s innovative theories and designs might be better understood in a twenty first century architectural context is finally explored This book finally restores Frederick Kiesler to his rightful place in the history of twentieth century art and architecture By a careful analysis of his sometimes fraught collaboration with the mercurial Peggy Guggenheim Haines Cooke uncovers the fascinating story of Kiesler TM s ground breaking new vision for the display of abstract art rendered all the more poignant by its significant yet largely subliminal influence on much of the best in recent museum and gallery architecture Dr Jonathan Hale University of
