**Cortical Evolution in Primates** Steven P. Wise, 2023-11-27 Cortical Evolution in Primates provides a stand alone resource for neuroscience graduate students and established neuroscientists who have an interest in cortical evolution and primates Discussions of both cortical evolution and primates often rely on terms and concepts unfamiliar to many neuroscientists but such readers will have no need to look elsewhere to understand the text or figures in this book As well as reviewing the pertinent terminology and taxonomy Wise explores the palaeontology adaptations and paleoecology of primates Through summarizing a neglected source of data fossil primates the book harnesses the power of comparative neuroanatomy to examine how cortical maps changed during primate evolution including nine proposals on why the cortex changed Together these topics inform a full understanding of cortical evolution in primates Wise concludes that the cortex expanded more recently than most neuroscientists suspect and it happened many times Furthermore cortical expansion

occurred independently in several major primate lineages as ancestral primates adapted to the ecosystems of their time and place Natural selection favored the expansion of cortical areas with neural representations that provided a selective advantage to ancestral primates in those times and those places **Paleobiology** ,1978 The Publishers' Trade List Annual ,1984 *The Academy* ,1898 **Memory Harbour** Filson Young,1909 *The History of Creation, Or, The Development of the Earth and Its Inhabitants by the Action of Natural Causes* Ernst Haeckel,1880 **The Academy and Literature** ,1898 **Ancient Divine Emperor** Wei NiErLai,2020-05-27 Killing intent filled the sky and the stars began to spin Killing intent filled the air Dragons snakes and landings The people in the area were filled with killing intent and the Heavens were overturned In the four directions of the universe smoke and dust began to rise The people of the world appeared one after another Within the seemingly powerful imperial court a hundred sons of bitches were fighting to ascend to the throne and the world was in turmoil The fallen prince Hong Yu who had obtained a martial talisman by chance rose to prominence at the end of the day He continued to push himself forward reaching the ninth heaven just for the sake of proving himself to be the Primordial God Emperor PS Baby who likes this book can add penguin group 596284486 **Chamber's Encyclopædia** ,1897 *What can simple brains teach us about how vision works* Davide Zoccolan,David D. Cox,Andrea Benucci, R. Clay Reid,2015-11-18 Vision is the process of extracting behaviorally relevant information from patterns of light that fall on retina as the eyes sample the outside world Traditionally nonhuman primates macaque monkeys in particular have been viewed by many as the animal model of choice for investigating the neuronal substrates of visual processing not only because their visual systems closely mirror our own but also because it is often assumed that simpler brains lack advanced visual processing machinery However this narrow view of visual neuroscience ignores the fact that vision is widely distributed throughout the animal kingdom enabling a wide repertoire of complex behaviors in species from insects to birds fish and mammals Recent years have seen a resurgence of interest in alternative animal models for vision research especially rodents This resurgence is partly due to the availability of increasingly powerful experimental approaches e g optogenetics and two photon imaging that are challenging to apply to their full potential in primates Meanwhile even more phylogenetically distant species such as birds fish and insects have long been workhorse animal models for gaining insight into the core computations underlying visual processing In many cases these animal models are valuable precisely because their visual systems are simpler than the primate visual system Simpler systems are often easier to understand and studying a diversity of neuronal systems that achieve similar functions can focus attention on those computational principles that are universal and essential This Research Topic provides a survey of the state of the art in the use of animal models of visual functions that are alternative to macaques It includes original research methods articles reviews and opinions that exploit a variety of animal models including rodents birds fishes and insects as well as small New World monkey the marmoset to investigate visual function The experimental approaches covered by these studies range from psychophysics and
