Joseph R. Lakowicz, 2006-04-18 Fluorescence spectroscopy and its applications to the physical and life sciences have evolved rapidly during the past decade The increased interest in fluorescence appears to be due to advances in time resolution methods of data analysis and improved instrumentation With these advances it is now practical to perform time resolved measurements with enough resolution to compare the results with the structural and dynamic features of mac molecules to probe the structures of proteins membranes and nucleic acids and to acquire two dimensional microscopic images of chemical or protein distributions in cell cultures Advances in laser and detector technology have also resulted in renewed interest in fluorescence for clinical and analytical chemistry Because of these numerous developments and the rapid appearance of new methods it has become difficult to remain current on the science of fluorescence and its many applications Consequently I have asked the experts in particular areas of fluorescence to summarize their knowledge and the

current state of the art This has resulted in the initial two volumes of Topics in Fluorescence Spectroscopy which is intended to be an ongoing series which summarizes in one location the vast literature on fluorescence spectroscopy The third volume will appear shortly The first three volumes are designed to serve as an advanced text These volumes describe the more recent techniques and technologies Volume 1 the principles governing fluorescence and the experimental observables Volume 2 and applications in biochemistry and biophysics Volume 3 **Interface**, 1985 *Whitaker's Cumulative Book List*, 1983 The Computer Instructor, 1984 Computer Books and Serials in Print, 1985 *Scientific and Technical Aerospace Reports*, 1983 National Union Catalog, 1981 Library of Congress, 1982
