## **Applied Fluorescence In Chemistry Biology And Medicine:**

**Applied Fluorescence in Chemistry, Biology and Medicine** Wolfgang Rettig, Bernd Strehmel, Sigurd Schrader, Holger Seifert, 2012-12-06 The light of the sun the source of life and a god in ancient times was always associated with warmth or even burning heat When man learnt to tame fire he had another source of light which was also hot All the more puzzling for the amazed observer has been the dance of fireflies glimmering in the dark How can an animal emit light Or what about the faint glow of walls in some pre historic tombs due to luminescent bacteria This sort of cold light is known today as chemiluminescence A related phenomenon is the aurora borealis with its swiftly moving curtains of light This is a special sort of electroluminescence of cold light another kind The basis of hot light is the thermal generation of electronically excited states normally of atoms or ions The source of cold light on the other hand is the chemical or electrochemical generation of excited states possible also for larger molecules By using light instead of chemical or electrical energy we can generate yet another type of cold light the ordinary luminescence fluorescence or phosphorescence The possibilities here have increased enormously because we can color tune the exciting light and gain specificity and we can modulate it in time or even in polarization opening new dimensions of research and applications

**Biology and medicine** Jerome Alexander, 1928 Fluorescence Spectroscopy, Imaging and Probes Ruud

Kraayenhof, Antonie J.W.G. Visser, Hans C. Gerritsen, 2012-12-06 The application of fluorescence in drug discovery high throughout screenings in genomics and proteomics is and will be evidently successful The increased use of fluorescence techniques is greatly enhanced by the improved instrumentation pioneered by inventive scientists and now made available commercially by several high tech companies Moreover the design and development of many new molecular probes with higher selectivity for specific microenvironmental properties has stimulated many new researchers to employ fluorescence techniques for solving their problems Probably the most significant breakthrough in fluorescence is its use in detection of single molecules and even of their real time dynamics Also probing inside living cells has become a hot topic in the life sciences This topic book reflects the updates of scientific progress presented by frontline researchers
