S Ben Porath

Ants And Termites:

Ants and Termites Anna Claybourne, 2004 Like humans these insects live in communities with home containing rooms and colonies with streets Work is shared out food is farmed and the young cared for This book describes the astonishing organisation in the lives of these social insects Ages 7 9 [Production Ecology of Ants and Termites](#) Michael Vaughan Brian, 1978 This study concentrates on the production ecology of ants and termites Ants and termites are highly socialised and their groupings in their most developed form enable them to function as large organisms comparable with the larger mammals in their influence in ecosystems **Ants Or Termites?** Lloyd Micheal English, Carol Sutherland, New Mexico State University. Cooperative Extension Service, 1994 **The Origin of Instinct** Édouard Bugnion, 1927 **The Social World of the Ants Compared with that of Man** Auguste Forel, 1928 **Behavioral Ecology of the Eastern Red-backed Salamander** Robert G. Jaeger, Birgit Gollmann, Carl D. Anthony, Caitlin R. Gabor, Nancy R. Kohn, 2016-08-04 Examines over fifty years of research of the red backed salamander **Unwelcome Guests!** Maryland. Pesticide Regulation Section, 1995* [Soil Microbiology, Ecology and Biochemistry](#) , 2006-12-22 Now in its third edition this classic textbook includes basic concepts and applications in agriculture forestry environmental science and a new section entirely devoted to ecology This revised and updated edition guides students through biochemical and microbial processes in soils and introduces them to microbial processes in water and sediments Soil Microbiology Ecology and Biochemistry serves as an invaluable resource for students in biogeochemistry soil microbiology soil ecology sustainable agriculture and environmental amelioration NEW TO THIS EDITION New section on Ecology integrated with biochemistry and microbiology Sections on exciting new methodology such as tracers molecular analysis and computers that will allow great advances in this field Six new chapters bioremediation soil molecular biology biodiversity global climate change basic physiology and ecological interpretations Expanded with contributions from leading soil microbiologists and agronomists on both fundamental and applied aspects of the science Full color figures Includes a website with figures for classroom presentation use **The Soul of the White Ant** Eugene Marais, 2009-06-21 This book by Eug ne Marais is a passionate insightful account into the world of termites It is a meticulously researched expose of their complex highly structured community life Originally translated into English in 1937 the quality of research remains as relevant today as it was when it was first published This illuminating account will not only appeal to those with a scientific interest in termites but will similarly enthrall readers who are new to their captivating world An exceptional feature of his detailed research is the extraordinary psychological life of the termite While the studies are based in South Africa the extensive research also includes the termites of Magnetic Island Australia You will be taken on an exciting journey into the amazing life of termites as their astonishing world of hierarchy and roles within their community is revealed in captivating detail His years of unceasing work on the veld led Eug ne Marais to formulate his theory that the termite nest is similar in every respect to the organism of an animal He observed that the workers and soldiers resemble red

and white blood cells while the fungus gardens are the digestive organ The queen functions as the brain controlling the collective mind and the sexual flight of the kings and queens is similar in every aspect to the escape of spermatozoa and ova

Reviews I have never read a book written in such a unique style It is as though Eugene Marais breathes life into the words animating the lives and struggles of the white ants in such a way that they almost seem human As a safari Guide in the Okavango Botswana for many years I used this book as a basis for presenting a fascination for the smaller creatures of the African bush my home for my entire life and which I was privileged to share with many clients from different countries

Termite mounds are really interesting and Eugene Marais compared the infrastructure of a termitary to that of the human body Writing from the heart this scientific author instills a wonder in the reader of the incredible intricacies of nature in a light hearted easily readable manner This book doesn't quit when it comes to fascinating insights about termites I read it with almost no knowledge of what these tiny creatures are capable of and I was transfixed by these rich and complex insect societies For the layman this is an entertaining and informative introduction to a very amazing creature Brilliant and thought provoking material

Contents 1 The Beginning of a Termitary 2 Unsolved Secrets 3 Language in the Insect World 4 What is the Psyche 5 Luminosity in the Animal Kingdom 6 The Composite Animal 7 Somatic Death 8 The Development of the Composite Animal 9 The Birth of the Termite Community 10 Pain and Travail in Nature 11 Uninherited Instincts 12 The Mysterious Power which Governs 13 The Water Supply 14 The First Architects 15 The Queen in her Cell

Methuselah's Zoo Steven N. Austad, 2023-08-15 Stories of long lived animal species from thousand year old tubeworms to 400 year old sharks and what they might teach us about human health and longevity Opossums in the wild don't make it to the age of three our pet cats can live for a decade and a half cicadas live for seventeen years spending most of them underground Whales however can live for two centuries and tubeworms for several millennia Meanwhile human life expectancy tops out around the mid eighties with some outliers living past 100 or even 110 Is there anything humans can learn from the exceptional longevity of some animals in the wild In Methuselah's Zoo Steven Austad tells the stories of some extraordinary animals considering why for example animal species that fly live longer than earthbound species and why animals found in the ocean live longest of all Austad the leading authority on longevity in animals argues that the best way we will learn from these long lived animals is by studying them in the wild Accordingly he proceeds habitat by habitat examining animals that spend most of their lives in the air comparing insects birds and bats animals that live on and under the ground from mole rats to elephants and animals that live in the sea including quahogs carp and dolphins Humans have dramatically increased their lifespan with only a limited increase in healthspan we're more and more prone to diseases as we grow older By contrast these species have successfully avoided both environmental hazards and the depredations of aging Can we be more like them
