Application Of Vegetation Science To Forestry:

Handbook of Vegetation Science: Application of vegetation Science to forestry, edited by G. John ,1999

Handbook of vegetation science ,1974 *Vegetation Science in Forestry* Elgene E. O. Box,R.K. Peet,T. Masuzawa,I. Yamada,K. Fujiwara,P.F. Maycock,1995-01-31 More than a decade has passed since Professor Gisela Jahn completed Volume 12 of the Handbook of Vegetation Science dealing with the application of vegetation science in forestry mostly European forestry The volume was well received by the critics with the exception that they wanted a more diversified demonstration of forestry related vegetation science work and a wider representation of forest types from different continents The topics covered in this volume 12 1 widen the scope of vegetation science work in forestry over the phytosociological work which was the main focus in the Handbook as perceived by Dr T xen Section 1 Overview T Kira Forest Ecosystems of East and Southeast Asia in a Global Perspective E O Box Climatic Relations of the Forests of East and Southeast Asia K Iwatsuki Species Diversity in East Asia in Global Perspective The remaining contributions are divided into the following sections Evergreen Forest Region Summergreen Forest Region Montane Boreal Region Tropical Forest Region *Vegetation science applications for rangeland analysis and management* P.T. Tueller,2012-12-06 Natural grasslands pastures and meadows are among the vegetation types most frequently investigated with phytosociological methods This was one of the reasons why volume 13 Application of vegetation science to grassland husbandry and agriculture edited by W Krause appeared as one of the first volumes of this handbook It appeared under the chief editorship of Prof R Tiixen and in his time main emphasis of the handbook was placed on Ziirich Montpellier methods and the European vegetation When we redesigned the handbook we felt the need to include other methods and aims of grassland analyses as well as a more global coverage of grasslands Especially the natural dry and semidry areas of the world needed to be covered was very fortunate in getting Prof Tueller of the University of Reno I Nevada as an editor for this volume He and the colleagues he motivated to compile volume 14 on Application of vegetation science to rangeland analysis and management have created a truly global coverage of the topics interesting for vegetation analyses in natural grasslands Since volume 13 covered the problems of anthropogenically created grasslands this topic was not expressly treated in order to avoid duplication For the same reason no specific attempt was made to get more papers from Europe and the temperate forest region in general The cooperation with Dr Tueller has been very rewarding for me *Application of Vegetation Science to Grassland Husbandry* W. Krause,2013-11-11 WERNER KRAUSE INTRODUCTION GENERAL COMMENTS ON THIS VOLUME The subject Application of vegetation science to grassland husbandry is not limited by geographical boundaries It is pro posed to cover this subject in an internationally applicable work of reference However to avoid omissions it would have to em brace all the diversity of grassland from the Arctic to the Equa tor The term application requires that the papers contained herein take into account both generally relevant scientific knowl edge and the special needs of practical farming The latter are not satisfied solely by the laws of

vegetation science the changing effects of the market politics the distribution of wealth and poverty highly developed technology and the continued use of archaic farming methods must all be considered To try to cover all this adequately in one volume of approximately 550 pages is a hopeless task The editor and the authors had to limit themselves to presenting a selection of problems and attempts to solve them with the aim that these examples should indicate how much vegetation science can contribute to grassland husbandry and the scope of this contribution is broadened by the references quoted The arrangement of the sections within this volume does not lend itself to specific suggestions for the management of individual systems However grassland husbandry can expect to obtain from this work an insight into some overall general relationships which could assist the adviser in the formulation of more specific improvement plans *Forest Science* ,1993
