**Decision-aiding Software** Stuart S. Nagel, 1992-01-01 *Computer-Aided Decision Analysis* Stuart S. Nagel, 1993-06-30

The essence of decision aiding software is that it consists of various forms of microcomputer programming designed to enable users to process a set of 1 goals to be achieved 2 alternatives available for achieving them and 3 relations between goals and alternatives in order to choose the best alternative combination allocation or predictive decision rule Benefits from using decision aiding software include 1 being more explicit about goals to be achieved alternatives available for achieving them and relations between goals and alternatives 2 being stimulated to think of more goals alternatives and relations than one would otherwise be likely to do 3 being prepared to handle multiple goals alternatives and relations without getting confused and without feeling the need to resort to a single composite goal or a single go no go alternative 4 being encouraged to experiment with changes in the inputs into one s thinking to see how one s conclusions are affected and 5 being better able to achieve or exceed one s goals when choosing among alternatives or allocating scarce resources There are five parts to the book covering 1 a broad overview of decision aiding packages including criteria for evaluating them 2 approaches that are based on management science and operations research including linear programming and decision trees 3 spreadsheet based software generally with goals on the columns alternatives on the rows relations in the cells overall totals for each alternative at the far right and a capability for indicating how the totals would be altered as a result of changes in the inputs 4 expert systems software including rule based and knowledge based expert systems and 5 general applications of decision aiding software and a discussion of the increasing utilization of such software **Multi-objective Group Decision**

**Making: Methods Software And Applications With Fuzzy Set Techniques (With Cd-rom)** Guang-quan Zhang, Da Ruan, Jie Lu, Fengjie Wu, 2007-05-10 This book proposes a set of models to describe fuzzy multi objective decision making MODM fuzzy multi criteria decision making MCDM fuzzy group decision making GDM and fuzzy multi objective group decision making problems respectively It also gives a set of related methods including algorithms to solve these problems One distinguishing feature of this book is that it provides two decision support systems software for readers to apply these proposed methods A set of real world applications and some new directions in this area are then described to further instruct readers how to use these methods and software in their practice a **Decision-Aiding Software and Legal**

**Decision-Making** Stuart S. Nagel, 1989-09-26 The use of microcomputers as decision aids in law practice is increasing

rapidly Nagel here shows how developments in software over the last few years are making microcomputers practically indispensable to lawyers as decision aids This is in contrast to his earlier book on Microcomputers as Decision Aids in Law Practice It dealt speculatively with ways in which decision aiding software could be used by lawyers for judicial prediction litigation strategy allocating scarce resources and negotiation mediation The book is divided into three parts covering general developments specific lawyer skills and application to all fields of law The first part previews various uses of decision aiding software by practicing lawyers including a general discussion of the potential and actual benefits of such software How decision aiding software enhances specific lawyer skills comprises the second and largest part of the work Among the topics discussed are computer aided counseling computer aided mediation legal policy evaluation and computer aided advocacy law prediction and legal administration In the third part Nagel assesses applications of decision aiding software to all fields of law with an emphasis on contracts property torts family law criminal law constitutional law economic regulation international law civil procedure and criminal procedure In a provocative concluding chapter he deals with the thorny issues of individual ethics and professional responsibility in the context of microcomputers Because decision aiding software encourages decision makers to be much more explicit about their goals than they otherwise would be its use raises questions as to whose goals should be pursued and to what degree This is a nuts and bolts guidebook that will be a valuable tool for practicing attorneys with some knowledge of microcomputers and is recommended reading for legal scholars and law students
