Applications Of Ion Beams To Metals:

Applications of Ion Beams to Metals S. T. Picraux, E. P. EerNisse, Frederick Ludwig Vook, 1974 Conferences have been held in the past on atomic collision phenomena and on the applications of ion beams to semiconductors However within the past year it became apparent that there is a growing new area of active research involving the use of ion beams to modify and study the basic properties of metals As a result a topical conference was organized to bring together for the first time scientists with a wide range of backgrounds and interests related to this field This book contains the proceedings of the International Conference on Applications of Ion Beams to Metals which was held in Albuquerque New Mexico October 2 4 1973 Much of the work presented herein represents ideas and concepts which have had little or no previous exposure in the open literature The application of ion beams to superconducting properties for example is quite new as is the chapter on ion induced surface reactions which includes primarily oxidation and corrosion studies of implanted materials These areas as well as the chapter on implantation alloy formation indicate important future areas of the application of ion beams to metals A reading of the chapters on superconductivity and on oxidation and corrosion can serve to bring one up to date on nearly all the existing information in these areas of the ion beam modification of metals A broad perspective of the oxidation area is given in the invited paper by G Dearnaley

High Resolution Focused Ion Beams: FIB and its Applications Jon Orloff, Lynwood Swanson, Mark Utlaut, 2003 In this book we have attempted to produce a reference on high resolution focused ion beams FIBs that will be useful for both the user and the designer of FIB instrumentation We have included a mix of theory and applications that seemed most useful to us The field of FIBs has advanced rapidly since the application of the first field emission ion sources in the early 1970s The development of the liquid metal ion source LMIS in the late 1960s and

early 1970s and its application for FIBs in the late 1970s have resulted in a powerful tool for research and for industry There have been hundreds of papers written on many aspects of LMIS and FIBs and a useful and informative book on these subjects was published in 1991 by Phil Prewett and Grame Mair Because there have been so many new applications and uses found for FIBs in the last ten years we felt that it was time for another book on the subject
