Proceedings of the Workshop on Applications of Remote Sensing in Hydrology G. W. Kite, Anthony Wankiewicz, Canadian Climate Centre, National Hydrology Research Institute (Canada), Canadian Water Resources Association, 1990 The two principal topics of this workshop were hydrological modelling and microwave radiometry The hydrologic models session concentrated on applications of GOES NOAA and Landsat data in various hydrologic watershed models and contained discussion on means of increasing the utility of satellites for hydrologic modellers The microwave hydrology session focused on promising applications and the benefits of this method of data collection for monitoring modelling and forecasting at field and basin scales The publication includes the texts of all session presentations and related workshops A list of participants concludes the proceedings

Remote Sensing in Hydrology and Water Management Gert A. Schultz, Edwin T. Engman, 2012-12-06 The authors of this book have been approached by consulting engineers You know about remote sensing and thus you can obtain hydrological information where no data exist even without ground measurements so that I can design the required capacity of a drinking water supply reservoir in a developing country On the other hand the authors have been told Remote sensing is not of much use since it is still impossible to estimate ground water resources or surface water flows from remote sensing data The major aim of this book is to correct such unjustified illusions as well as exaggerated criticism by providing the reader with sound information on the potential and the limitations of remote sensing in the field of hydrology and water management The book is meant to be a reference and text it is not a collection of papers from some meeting The book is intended to provide methods to help the readers solve their own problems in hydrology and water management Therefore scientific issues are presented only as far as they are necessary for the application of remote sensing The reader will see that in some fields e g evapotranspiration soil moisture hydrological modeling the scientific development is still on the way while in others operational techniques are already available e g snow melt run off model land use classification and detection of land use changes flood forecasting and control
