Applied Control S. G. Tzafestas,1993-04-29 This book provides a representative set of modern methodologies and applications including new topics in the field discussing a wide range of issues and treating them in depth The book describes analytical processes for fault diagnosis of automatic control systems examines modern sensors and actuators as well as measurement techniques considers multidimensional feedback control and image restoration procedures among other topics

Methods and Applications of Intelligent Control S.G. Tzafestas,2012-12-06 This book is concerned with Intelligent Control methods and applications The field of intelligent control has been expanded very much during the recent years and a solid body of theoretical and practical results are now available These results have been obtained through the synergetic fusion of concepts and techniques from a variety of fields such as automatic control systems science computer science neurophysiology and operational research Intelligent control systems have to perform anthropomorphic tasks fully autonomously or interactively with the human under known or unknown and uncertain environmental conditions Therefore the basic components of any intelligent control system include cognition perception learning sensing planning numeric and symbolic processing fault detection repair reaction and control action These components must be linked in a systematic synergetic and efficient way Predecessors of intelligent control are adaptive control self organizing control and learning control which are well documented in the literature Typical application examples of intelligent controls are intelligent robotic systems intelligent manufacturing systems intelligent medical systems and intelligent space teleoperators Intelligent controllers must employ both quantitative and qualitative information and must be able to cope with severe temporal and spatial variations in addition to the fundamental task of achieving the desired transient and steady state performance Of course the level of intelligence required in each particular application is a matter of discussion between the designers and users The current literature on intelligent control is increasing but the information is still available in a sparse and disorganized way

Neural Networks and Simulation Methods Wu,1993-12-14 This work explains network dynamics learning paradigms and computational capabilities of feedforward self organization and feedback neural network models addressing specific problems such as data fusion and data modeling It goes on to describe a neural network simulation software package USTCNET and gives some segments of the program
