Black Sumer: the African Origins of Civilisation Hermel Hermstein, 2012-10-07 The Sumerian Problem HAS BEEN SOLVED And the solution is African According to mainstream historians the Sumerians of ancient southern Iraq founded the world's first civilization They are supposed to have spoken a language which is not genetically related to any known language This is known as the Sumerian Problem This book represents the greatest discovery in ancient history for the last hundred years It demonstrates that Sumerian was genetically related to the Niger Congo languages of West Africa Their descendants are the African Diaspora of North and South America and the Caribbean Many claimed to have solved the Sumerian problem in the past Hermstein's differs from previous attempts by first showing the reader how to identify genetically related languages through recurrent sound correspondences in basic vocabulary He then gives examples from acknowledged genetic relationships such as Germanic to show the reader what the evidence should look like The author also shows what false correspondences look like and how to tell the difference He also makes use of a number of tests that would determine whether languages are related using probability This is CLEARLY UNLIKE ANY PREVIOUS ATTEMPT at solving the Sumerian problem The author reconstructs the epic voyage that took the ancestors of the Sumerians from a homeland in West Africa to Djibouti before making a journey by sea around Oman and to the head of the Persian Gulf The other major discovery in the book is that the Sumerians had a much more advanced system of astronomy than has been supposed The constellations had geographic associations in the Classical period through myth Hermstein shows how the geographic coordinates of the associated places closely correspond to the celestial coordinates of certain points within the constellations It is impossible to develop such a system without knowing the earth is round The text supplying the point of origin for the system of geo celestial coordinate correspondence is from the Sumerian period Two amazing discoveries in one book Both humanity and civilization have an African origin The ancients knew a lot more than we realized The Journal of Negro History Carter Godwin Woodson, Rayford Whittingham Logan, 1917 The scope of the Journal include the broad range of the study of Afro American life and history *Heresy in the University* Jacques Berlinerblau, 1999 One of the most controversial books to come out of the academy in the last fifteen years is Martin Bernal's Black Athena It has been a true cause celebre Afrocentrists have both praised the book and claimed that Bernal stole from the work of black scholars to create his study of the Afroasiatic roots of classical civilization Classicists feel passionately about what they perceive as an attack from an outsider on the origins not only of ancient Greece but of their own discipline It seems that everyone has something to say about the book the question is how many really understand it In *Heresy in the University* Jacques Berlinerblau provides an exegesis of the contents of Black Athena making it accessible to a wider audience As he clarifies and restates Bernal's opus Berlinerblau identifies Bernal's flaws in reasoning and gaps in evidence He cuts to the heart of Bernal's prose singling out the key points of Bernal's argument explaining and arranging them in a cogent manner Berlinerblau addresses the critics really important objections including his own and links each of them to the appropriate substantive argument in Black Athena

He goes beyond simple summary and exposition to present the underlying stated and unstated agendas of Bernal and his critics. Ultimately he exposes both sides and asks what the flawed reasoning from all concerned reveals about the stakes in this key academic dispute and what that in turn says about the modern academy. Jacques Berlinerblau is an assistant professor and director of Judaic studies at Hofstra University. [An Introduction to Classical African Civilizations \[sic\]](#)
