Pure Science of Columbia University In a number of communications recently appearing 7 addition compounds of organic acids with organic substances containing oxygen have been described and compared In a later paper⁸ the results of this series of investigations were summed up and certain laws derived which were then applied to aqueous solutions of a series of acids and their validity tested by means of freezing point curves As the results Of these investigations are of great importance and have a direct application to this work it seems advisable to repeat them here When an organic substance containing oxygen is added to an acid of the type HX the existence of an addition compound in the liquid mixture can usually be demonstrated In every case the formation of addition compounds becomes more evident both in the number and the stability of the compounds isolated the more divergent the acidic strengths of the two components With substances of similar acidic strengths no evidence of compound formation has been found About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
