After Ontology:

Ontology After Carnap Stephan Blatti, Sandra Lapointe, 2016 Rudolf Carnap's deflationary approach to ontology is once again attracting considerable interest and support Eleven original essays by leading voices in metametaphysics deepen our understanding of Carnap's contributions to metaontology and explore how his legacy can be mined for insights into the contemporary debate

Ontology after Philosophical Psychology Michela Bella, 2019-08-21 Ontology after Philosophical Psychology addresses the question of William James's continuity of consciousness with a view to its possible actualizations In particular Michela Bella critically delineates James's discourse In the wake of Darwin's theory of evolution at the end of the nineteenth century James's reflections emerged in the field of physiological psychology where he developed for the case for a renewed epistemology and a new metaphysical framework to help us understand the most interesting theories and scientific discoveries about the human mind Bella's analysis of the theme of continuity makes it possible to appreciate both historically and theoretically the importance of James's gradual transition from making observations of experimental psychology on the continuity of thought to developing an epistemological and ontological argument that continuity is a characteristic of experience and reality This analysis makes it possible both to clarify James's position in relation to his historical context and to highlight the most original results of his work

The Remains of Being Santiago Zabala, 2009-08-26 In *Basic Concepts* Heidegger claims that Being is the most worn out and yet also that Being remains constantly available Santiago Zabala radicalizes the consequences of these little known but significant affirmations Revisiting the work of Jacques Derrida Reiner Sch rmann Jean Luc Nancy Hans Georg Gadamer Ernst Tugendhat and Gianni Vattimo he finds these remains of Being within which ontological thought can still operate Being is an event Zabala argues a kind of generosity and gift that generates astonishment in those who experience it This sense of wonder has fueled questions of meaning for centuries from Plato to the present day Postmetaphysical accounts of Being as exemplified by the thinkers of Zabala's analysis as well as by Nietzsche Dewey and others he encounters don't abandon Being Rather they reject rigid determined modes of essentialist thought in favor of more fluid malleable and adaptable conceptions redefining the pursuit and meaning of philosophy itself

Machine Learning Paradigms: Theory and Application Aboul Ella Hassanien, 2018-12-08 The book focuses on machine learning Divided into three parts the first part discusses the feature selection problem The second part then describes the application of machine learning in the classification problem while the third part presents an overview of real world applications of swarm based optimization algorithms The concept of machine learning ML is not new in the field of computing However due to the ever changing nature of requirements in today's world it has emerged in the form of completely new avatars Now everyone is talking about ML based solution strategies for a given problem set The book includes research articles and expository papers on the theory and algorithms of machine learning and bio inspiring optimization as well as papers on numerical experiments and real world applications

Reinvigorating the Lost Philosophical Self Qinghai

Gao,2025-03-29 This book not only presents Gao's major philosophical views and background but also reflects our self-consciousness and zeitgeist. *Reinvigorating the Lost Philosophical Self* is the last major published work by Qinghai Gao. The three parts of the book are organized around the themes of traditional reality and philosophy, philosophy and innovation and man and philosophy respectively. The book does not only provide a philosophical standpoint but also broaden the horizon on which the Chinese turn to themselves to the times and to the world. Presently under the context of the Covid pandemic, trade war, regional conflicts and economic slowdown, there is an increasing risk of disruption to people's lives. The book sheds some light on where we are going. Coming from a Chinese philosopher, *Reinvigorating the Lost Philosophical Self* is concerned with our destiny, reflects our hardships and attempts to provide answers to our questions. **Ontology After Ontotheology**

Gerrit Jan van der Heiden,2014 Van der Heiden works largely with present day thinkers such as Badiou, Nancy, Romano, Meillassoux and Agamben and examines contemporary thought as it seeks to recover a sense of the absolute but without recourse to specifically theological underpinnings. **Business Information Systems** Witold Abramowicz,2007-06-06 This book constitutes the refereed proceedings of the 10th International Conference on Business Information Systems BIS 2007 held in Poznan, Poland in April 2007. Authors of the accepted papers came from over 20 countries. This volume of the proceedings contains the abstracts of three keynote speeches and all the full and short papers. The full papers were categorized into three broad sections, namely AI foundations and technologies, computational intelligence and AI in specialized domains. AI 2005 also hosted several tutorials and workshops providing an interacting mode for specialists and scholars from Australia and other countries. Ronald R. Yager, Geoff Webb and David Goldberg in conjunction with ACAL05 were the distinguished researchers invited to give presentations. Their contributions to AI 2005 are really appreciated.

Towards Very Large Knowledge Bases N. J. I. Mars,1995 In the early days of artificial intelligence it was widely believed that powerful computers would in the future enable mankind to solve many real world problems through the use of very general inference procedures and very little domain specific knowledge. With the benefit of hindsight, this view can now be called quite naive. The field of expert systems, which developed during the early 1970s, embraced the paradigm that Knowledge is Power. Even very fast computers require very large amounts of very specific knowledge to solve non-trivial

problems Thus the field of large knowledge bases has emerged
