Carbohydrates from Trichoderma Reesei and Other Microorganisms Marc Claeysens, Wim Nerinckx, Kathleen Piens, 1998  
Once dubbed the green fungus among us *Trichoderma reesei* has long been at the centre of research into the biochemistry and structure of enzymes as potential sources of cellulase Carbohydrases from *Trichoderma reesei* and other Microorganisms updates the research results from the last 4 years in the biochemistry of microbial carbohydrases glycolases in a comprehensive review This vivid confrontation of expert views on structure function relationships in fungal and bacterial cellulases and hemicellulases also covers topics such as advances in application fields new findings in glycoprotein structures and new insights into domain structures It will be of particular interest to biochemists molecular biologists X ray crystallographers and industrialists

Recent Progress in Bioconversion of Lignocellulosics G.T. Tsao, 2003-06-30 This volume describes recent advances in the bioconversion of lignocellulosics It starts with two articles on genetics and properties of cellulases and their reaction kinetics and mechanisms The cost of cellulases has been a hindrance to large scale use of enzymatic hydrolysis Two articles on cellulase production by submerged fermentation and by solid state fermentation are included to describe the state of the art in this area Dilute acid hydrolysis of cellulose continues to be of interest as well as potentially useful The most recent advances in this area is also covered A great deal of progress has been made in genetic engineering for improved regulation of xylose fermentation by yeasts An article on genetically engineered *Saccharomyces* for simultaneous fermentation of glucose and xylose describes the importance advances made in production of fuel ethanol from lignocellulosic biomass In recent years there has been increasing interests in recycling and the reuse of scrap paper as well as environment considerations A contribution is presented which describes the research perspectives in that area Finally recent advances in the use of lignocellulosic biomass for the production of ethanol and organic acids are presented in two articles Renewable resources are inevitably of great importance in the years to come There is a never ending search for better living conditions for human beings The more resource materials can be recycled the richer we will be
