Carbohydrate Antigens:

Carbohydrate Antigens Per J. Garegg, Alf A. Lindberg, American Chemical Society. Division of Carbohydrate Chemistry, 1993 Developed from a symposium at the Fourth Chemical Congress of North America 202nd National Meeting of the ACS in New York City August 1991 chapter papers present research on topics including how proteins recognize and bind oligosaccharides synthesis and immunological properties of glycopeptide T cell determinants Vibrio cholerae polysaccharide studies and purification of oligosaccharide antigens by weak affinity chromatography Annotation copyright by Book News Inc Portland OR

Immunobiology of Carbohydrates Simon Wong, Gemma Arsequell, 2003-10-31 This book is unique in providing pertinent information on the various established roles carbohydrate play in the immune system and how the innate and adaptive immune systems respond to this type of microbial antigens The editors selected only topics that have established basic and clinical relevance to this field The topics from basic research are organised like a textbook in order to guide the readers through complex sets of events that lead to clearance of or to immune responses toward carbohydrate antigens The book is clear concise and contains fully annotated summaries of the key basic and practical information on carbohydrate immunology from current literature These topics are written by investigators from various disciplines chemistry medicine biochemistry glycobiology and immunology creating a fine balance in the point of views presented in the book It explores the challenges and rewards of understanding the importance of carbohydrates and glycoconjugates in health and disease applying new knowledge from carbohydrate immunology in improving or developing novel sugar based therapeutics and vaccines and medicines This book is most suitable for glycobiologists and immunologists but many researchers whose interests background and expertise are in any of the fifteen topics presented in this book will also find it appealing It is also a valuable resource for postgraduate students clinicians or anyone else who is curious about the role of carbohydrates in immunology and would like to see the topics combined under one cover and in relation to each other

Anticarbohydrate Antibodies

Paul Kosma, Sven Müller-Loennies, 2011-11-27 Many pathogens and aberrant malignant cells express unique carbohydrates on their surface representing attractive targets for vaccine design Considerable progress has recently been made in the identification of novel carbohydrate based vaccines and a large number has reached clinical phase studies The success of several licensed carbohydrate based vaccines against bacterial pathogens such as Haemophilus influenzae type b Neisseria

meningitidis or *Streptococcus pneumoniae* demonstrates their great potential. However, the study of anti-carbohydrate antibodies is technically challenging and partly because of low affinities and promiscuous specificity, they have not been medically exploited to full potential. The study of antibody specificities and identification of protective carbohydrate epitopes lies at the heart of successful vaccine design. In addition to therapy, antibodies in general serve as diagnostic tools in medical and scientific laboratories. In this setting, high affinity and exquisite specificity are important factors for their successful use. **Anticarbohydrate Antibodies** from molecular basis to clinical application compiles current knowledge on the immunological recognition of carbohydrates by the adaptive immune system from a molecular perspective, providing fundamental insight needed for advancing clinically relevant diagnostics and therapeutic applications. Based on significant progress in the fields of glycoimmunology and structural biology in recent years, the book comprehensively reviews the state of the art in defining the key elements of carbohydrate recognition by antibodies, the molecular mimicry of carbohydrate epitopes, as well as the molecular features leading to specific and relaxed binding modes. Backed up by a combination of modern technologies to elucidate structural details of carbohydrate-antibody interactions, biomedically important carbohydrate antigens from viral, bacterial, parasite, insect, and tumor cells have been analyzed in in-depth reviews written by well-known experts in the field. Fundamental knowledge of these molecular mechanisms eventually provides a rational basis to improve efficacy of carbohydrate-based vaccines and to further refine diagnostic tools in detection of pathogens and malignant cells.

Permuted Medical Subject Headings National Library of Medicine (U.S.), 1991 [The Natural Anti-Gal Antibody as Foe Turned Friend in Medicine](#) Uri Galili, 2017-09-05. [The Natural Anti Gal Antibody as Foe Turned Friend in Medicine](#) provides a comprehensive review of the natural anti-Gal antibody, which is the most abundant antibody in humans, constituting 1% of immunoglobulins and the carbohydrate antigen it recognizes, the gal epitope. It discusses the discovery of this antigen-antibody system, its evolution in mammals, the pathological effects of this antibody, and its possible use in various therapies in humans. Most significantly, the book discusses microbial and regenerative therapies in which an antibody present in all humans may be harnessed as an in vivo pharmaceutical agent that enables a wide variety of therapies. Some of these therapies are described as experimental studies that are compiled in this book; other already studied therapies in the area of cancer immunotherapy are also included in this book. Provides tactics on how to improve cancer immunotherapy and viral vaccine immunogenicity. Includes discussions on therapies that accelerate the healing of normal and chronic wounds and of burns. Covers the regeneration of bio implants. **Carbohydrate Pathology** Erik Dabelsteen, Henrik Clausen, 1992

Carbohydrate-Protein Interaction Adrienne E. Clarke, Ian A. Wilson, 1988-09-27. Carbohydrate as the primary product of photosynthesis has a vital role in the maintenance of life on this planet. Until relatively recently, interest in complex

carbohydrates focussed on their structural role in the extracellular matrix cell wall of animal plant and microbial cells and on their role as energy sources e g starch and glycogen and structural components e g cellulose in natural products There was however indirect evidence that carbohydrates could play an informational role this evidence was from the find ing last century that plant lectins caused specific agglutination of certain animal cells and more recently that the agglutination was mediated by interactions between the plant lectin and cell surface carbohydrates It is now clear that endogenous carbohydrate binding proteins are important in cell cell recognition phenomena in animal systems Recently impressive evidence has been presented that complex oligosaccharides derived from cell walls are also important in plant recognition events for example in signalling the defence mechanisms of a plant to respond to attack by insects and microbial pathogens

The Chemical Aspects of Immunity Harry Gideon Wells,1925 *The Journal of Immunology* ,1926 **Proceedings of the Society for Experimental Biology and Medicine** Society for Experimental Biology and Medicine (New York, N.Y.),1925 List of members in each volume **The Cornell Veterinarian** ,1911 *Carbohydrate-based Vaccines* René Roy,2008 This book is the first of its kind entirely dedicated to carbohydrate vaccines written by renowned scientists with expertise in carbohydrate chemistry and immunochemistry It covers the synthesis of carbohydrate antigens related to bacteria and parasites such as *Haemophilus influenzae* *Streptococcus pneumoniae* *Shigella flexneri* *Candida albicans* *Mycobacterium tuberculosis* and *Chlamydia* The first three chapters are of wide interest as they cover fundamental concerns in new vaccine developments The first one presents the immune system and how carbohydrate antigens are processed before protective antibodies are produced It also illustrates antigen presentation in the context of major histocompatibility complexes MHCs The second chapter describes regulatory issues when carbohydrate vaccines are involved while the third one discuss several techniques used in conjugation chemistry and the implication of certain chemical linkages that may induce unexpected anti linker antibodies This section will be particularly appealing for those involved in drug conjugate design pro drug developments and drug vectorization The book concludes with one chapter that illustrates the principle through which peptide antigens can functionally mimic carbohydrate epitopes thus unraveling the potential for peptide surrogates as replacement for complex carbohydrate structures This book is unique in that it covers all aspects related to carbohydrate vaccines including the success story with the first semi synthetic bacterial polysaccharide vaccine against *Haemophilus influenzae* type b responsible for pneumonia and meningitis liable for more than 600 000 infant deaths worldwide in developing countries The book also presents regulatory issues and will thus be vital for government agencies approving candidate vaccines It widely covers synthetic methodologies for the attachment of carbohydrate antigens to peptides and immunogenic protein carriers Vaccines against bacterial antigens cancer and parasites are also discussed by worldwide experts in this field in details No other book contains such a wide panel of different expertise It will also be useful to students and researchers involved with the immunology of foreign antigens and how the under appreciated carbohydrate

antigens are processed by the immune system
