Carbon Filaments and Nanotubes: Common Origins, Differing Applications? L.P. Biró, Carlos A. Bernardo, G.G. Tibbetts, Ph. Lambin, 2012-12-06 Carbon filament vapor grown carbon fibers and carbon nanotubes have been discovered to have remarkable properties opening the way for their use in intriguing and novel applications in electronics chemistry and materials science There are many similarities between nanotubes and filaments leading many researchers to critically compare the two materials their production and potential applications The two materials are compared and contrasted in depth in the present book which is a comprehensive review of current research activity growth mechanisms physical properties industrial production and applications The structures are discussed using a unified approach which helps to compare growth mechanisms contrasting morphological differences and detailing how novel properties depend on such differences

Nanofabrication Towards Biomedical Applications Challa S. S. R. Kumar, Josef Hormes, Carola Leuschner, 2006-03-06 This book focuses on the materials synthetic methods tools and techniques being developed in the nanoregime towards the life sciences in particular biology biotechnology and medicine Readers from materials science engineering chemistry biology and medical backgrounds will find detailed accounts of the design and synthesis of nanomaterials and the tools and techniques involved in their production for applications in biology biotechnology and medicine

The Fate of Persistent Organic Pollutants in the Environment Ebru Mehmetli, Bogdana Koumanova, 2007-12-14 Persistent organic pollutants POPs are organic compounds of natural or anthropogenic origin that resist photolytic chemical and biological degradation They are characterized by low water solubility and high lipid solubility resulting in bioaccumulation in fatty tissues of living organisms These properties of unusual high persistence and semi volatility coupled with other characteristics have resulted in the presence of POPs all over the world even in regions where they have never been used With the evidence of long range transport of these substances to regions the international community has now at several occasions called for urgent global actions to reduce and eliminate releases of these chemicals Many countries have already banned or severely restricted the production and use of the twelve POPs in recent decades Yet they remain a serious problem around the world Because these chemicals have the ability to travel long distances from their original sources relying on national level action alone is ultimately a futile effort This book employs a science based approach to identify and take action against POPs and additionally provides access to technical information on POPs The book will be an overview of the existing POP monitoring activities and programs

Nanotechnology for Electronics, Photonics, and Renewable Energy Anatoli Korokin, Predrag S. Krstić, Jack C. Wells, 2010-12-14 Tutorial lectures given by world renowned researchers have become one of the important traditions of the Nano and Giga Challenges NGC conference series 1 Soon after preparations had begun for the first forum NGC2002 in Moscow Russia the organizers realized that publication of the lectures notes would be a valuable legacy of the meeting and a significant educational resource and knowledge base for students young

Adsorption by Carbons Eduardo J. Bottani, Juan M.D. Tascón, 2011-10-10 Adsorption by Carbons covers the most significant aspects of adsorption by carbons attempting to fill the existing gap between the fields of adsorption and carbonaceous materials Both basic and applied aspects are presented The first section of the book introduces physical adsorption and carbonaceous materials and is followed by a section concerning the fundamentals of adsorption by carbons This leads to development of a series of theoretical concepts that serve as an introduction to the following section in which adsorption is mainly envisaged as a tool to characterize the porous texture and surface chemistry of carbons Particular attention is paid to some novel nanocarbons and the electrochemistry of adsorption by carbons is also addressed Finally several important technological applications of gas and liquid adsorption by carbons in areas such as environmental protection and energy storage constitute the last section of the book The first book to address the interplay between carbonaceous materials and adsorption Includes important environmental applications such as the removal of volatile organic compounds from polluted atmospheres Covers both gas solid and liquid solid adsorption
