## **Carbonaceous Aerosol:**

Carbonaceous Aerosol András Gelencsér, 2007-09-28 This monograph provides a unique and comprehensive coverage of the nature and atmospheric role of carbonaceous aerosol particles these big unknowns of the global atmosphere Even the concept of carbonaceous aerosol has just recently grown out of atmospheric pollution studies without ever being anchored to solidified nomenclature and terminology It is beyond any doubt that no major breakthrough can be expected in resolving climate issues without a better understanding of the role carbonaceous particles play in the global atmosphere This monograph may serve as an indispensable reference for all those interested in virtually any aspects of global atmospheric sciences especially for those who are stakeholders in inadvertent climate modification Thus atmospheric chemists physicists meteorologists and modellers may well find this monograph a thought inspiring and sometimes provocative overview of all global phenomena affected by or related to carbonaceous aerosol An anticipated advantage of this monograph is that it brings together these diverse atmospheric phenomena under the umbrella of carbonaceous aerosol in an interdisciplinary way which is a prerequisite of resolving global scientific issues

**Origins and Composition of Fine Atmospheric Carbonaceous Aerosol in the Sierra Nevada Mountains, California**, 2011 CARES, 2010 Carbonaceous aerosol components which include black carbon BC urban primary organic aerosols POA biomass burning aerosols and secondary organic aerosols SOA from both urban and biogenic precursors have been previously shown to play a major role in the direct and indirect radiative forcing of climate The primary objective of the CARES 2010 intensive field study is to investigate the evolution of carbonaceous aerosols of different types and their effects on optical and cloud formation properties

**Air Pollution Modeling and its Application XVII** Carlos Borrego, Ann-Lise Norman, 2007-04-05 In 1969 the North Atlantic Treaty Organisation NATO established the Committee on Challenges of Modern Society CCMS The subject of air pollution was from the start one of the priority problems under study within the framework of various pilot studies undertaken by this committee The organization of a periodic conference dealing with air pollution modeling and its application has become one of the main activities within the pilot study relating to air pollution The first five international conferences were organized by the United States as the pilot country the second five by the Federal Republic of Germany the third five by Belgium the next four by The Netherlands and the next five by Denmark and with this one the last three by Portugal This volume contains the papers and posters presented at the 27 NATO CCMS International Technical Meeting on Air Pollution Modeling and Its Application held in Banff Canada 24-29 October 2004 The key topics at this ITM included Role of Atmospheric Models in Air Pollution Policy and Abatement

Strategies Integrated Regional Modeling Effects of Climate Change on Air Quality Aerosols as Atmospheric Contaminants  
New Developments and Model Assessment and Verification 104 participants from North and South America Europe Africa  
and Asia attended th the 27 ITM The conference was jointly organized by the University of Aveiro Portugal Pilot Country and

**Investigation of Carbonaceous Aerosol Optical Properties to Understand Impacts on Air Quality and  
Composition** Michael Robert Olson, 2016 The optical properties of carbonaceous aerosols were investigated to understand  
the impact source emissions and ambient particulate matter PM have on atmospheric radiative forcing Black carbon BC is a  
strong absorber of visible light and contributes highly to atmospheric radiative forcing therefore it is important to link BC  
properties to combustion emission sources Brown carbon BrC is poorly understood and may be an important contributor to  
both positive and negative radiative forcing The research investigates these primary knowledge gaps The optical properties  
of carbonaceous aerosols were investigated to understand the impact source emissions and ambient particulate matter PM  
have on atmospheric radiative forcing Black carbon BC is a strong absorber of visible light and contributes highly to  
atmospheric radiative forcing therefore it is important to link BC properties to combustion emission sources Brown carbon  
BrC is poorly understood and may be an important contributor to both positive and negative radiative forcing The research  
investigates these primary knowledge gaps Multiple methods were developed and applied to quantify the mass absorption  
cross section MAC at multiple wavelengths of source and ambient samples The MAC of BC was determined to be  
approximately  $7.5 \text{ m}^2 \text{ g}^{-1}$  at 520nm However the MAC was highly variable with OC fraction and wavelength The BrC MAC  
was similar for all sources with the highest absorption in the UV at 370nm the MAC quickly decreases at larger wavelengths  
In the UV the light absorption by BrC could exceed BC contribution by over 100 times but only when the OC fraction is large  
90% as compared to the total carbon BrC was investigated by measuring the light absorption of solvent extracted fractions in  
water dichloromethane and methanol Source emissions exhibited greater light absorption in methanol extractions as  
compared to water and DCM extracts The BrC MAC was 2.4 to 3.7  $\text{m}^2 \text{ g}^{-1}$  at 370nm in methanol Ambient samples showed  
similar MACs for the water and methanol extracts Dichloromethane extracts did not have a significant light absorption  
characteristics for ambient samples BrC and BC were measured in Beijing China Both were reduced significantly when  
restrictive air pollution controls were put in place The industrial regions south and east of Beijing were the highest  
contributors to ambient BrC and BC The controls reduced BrC more than BC as compared to observations during the regions  
heating period Using the color characteristics of ambient PM a model was developed to estimate elemental and organic  
carbon EC OC The method will allow fast and cost effective quantification of PM composition in combination with large  
climate and health studies especially in the developing world

biogenic SOA precursors The NASA B 200 aircraft equipped with the High Spectral Resolution Lidar HSRL digital camera
