Machines in Our Hearts Kirk Jeffrey, 2003-04-01 Today hundreds of thousands of Americans carry pacemakers and implantable cardioverter defibrillators ICDs within their bodies These battery powered machines small computers in fact deliver electricity to the heart to correct dangerous disorders of the heartbeat But few doctors patients or scholars know the history of these devices or how heart rhythm management evolved into a multi billion dollar manufacturing and service industry *Machines in Our Hearts* tells the story of these two implantable medical devices Kirk Jeffrey a historian of science and technology traces the development of knowledge about the human heartbeat and follows surgeons cardiologists and engineers as they invent and test a variety of electronic devices Numerous small manufacturing firms jumped into pacemaker production but eventually fell by the wayside leaving only three American companies in the business today Jeffrey profiles pioneering heart surgeons inventors from the realms of engineering and medical research and business leaders who built heart rhythm management into an industry with thousands of employees and annual revenues in the hundreds of millions As Jeffrey shows the pacemaker first implanted in 1958 and the ICD 1980 embody a paradox of high tech health care these technologies are effective and reliable but add billions to the nation s medical bill because of the huge growth in the number of patients who depend on implanted devices to manage their heartbeats

Intraventricular Conduction Disturbances A. Alboni, 2012-12-06 Rhythm was the first expression of cardiac activity which fell under man s obser vation and the heart beat has always represented the very essence of life itself as it accelerates or slows during moments of rest effort joy and pain until it comes to a halt at the moment of death Undoubtedly the heart beat was for a considerable time the only semiological element by which man could interpret the dysfunctions of

the organism Even after thousands of years research into the alterations of cardiac rhythm still holds a certain fascination although modern methods and sophisticated devices have changed the approach to such studies Only about ten years ago the interpretation of arrhythmias was obtained by a standard electrocardiogram to which experimental findings on animals were still arbitrarily applied On the other hand the achievement of diagnostic decisions was of little importance outside the sphere of pure intellectual speculation since valid therapeutical treatments were lacking At present by means of electrophysiological investigations one can verify and check in situ the different forms and mechanisms through which rhythm and conduction disorders are manifested Thus achieving such a methodology which may be defined as a functional biopsy we are allowed to put forward more accurate therapeutic indications now available using both pharmacological and electrical treatment
