Cardiopulmonary Exercise Testing and Cardiovascular Health Karlman Wasserman, 2002

Cardiovascular Health in Children and Adolescents: Present and future Shikai Yu, Shaun Chen, Zhen-Yu Zhang, 2025-01-13 Cardiovascular disease is the most common chronic non infectious disease and ranked as the number one cause of death in the world Although usually manifested at older ages cardiovascular disease may originate from younger ages Massive studies have shown that cardiovascular risk factors tracked from childhood adolescence to adulthood Keeping an ideal cardiovascular health in childhood and adolescence is thus highly important for preventing the development of cardiovascular disease As cardiovascular disease is often perceived as a problem for the older population cardiovascular health in children and adolescents is usually neglected resulting them a long lasting exposure to unhealthy behaviors and factors of cardiovascular risk as well as lower detection and poor management of cardiovascular disease in children and adolescents The incidence and prevalence of cardiovascular disease and its risk factors in young people have been increasing over the past few decades as reported by many studies Recent data based on the National Health and Nutrition Examination Surveys 2005 2010 emphasized the worrying situation of the cardiovascular health in US adolescents More data are needed to reveal the current situation of cardiovascular health and the related organ damage in children and adolescents especially in low and middle income countries Also investigations are warranted to predict future trends and to develop potential intervention strategies aiming at the improvement of cardiovascular health in children and adolescents

Optimizing Revascularization and Conservative Therapy in Chronic Coronary Syndrome Josip A. Borovac, Aleksandra Gasecka, Dejan Milasinovic, Dino Mirić, 2026-02-13 Ischemic heart disease is the leading cause of disability and premature death worldwide Chronic coronary syndrome CCS previously known as stable angina is a progressive and chronic disease of the coronary arteries Its course can be significantly altered by lifestyle modifications conservative therapy pharmacotherapy and coronary revascularization These measures have a significant impact on the patient's journey in terms of symptoms quality of life and to a certain extent prognosis Furthermore these treatment strategies can ensure the long stable path of the disease even inducing its regression However a patient with CCS can be destabilized at any time usually by an acute atherothrombotic event Coronary revascularization can be offered to a patient through coronary artery bypass graft surgery CABG percutaneous coronary intervention PCI or sometimes a hybrid invasive approach While invasive strategies have proven profoundly effective in reducing mortality morbidity and symptoms in the setting of acute coronary syndrome their role in patients with CCS compared to conservative therapy is less clear In this patient population coronary revascularization is largely reserved for those with unacceptable and limiting angina despite conservative therapy significant left ventricular systolic dysfunction or high risk coronary anatomy This research topic aims to gather contributions from clinical and translational researchers worldwide on the challenges and advancements in diagnosing managing and risk stratifying patients with chronic coronary syndrome CCS The primary goals include identifying which CCS patients benefit most from revascularization determining criteria for revascularization in patients with severe left ventricular systolic dysfunction exploring factors influencing revascularization decisions assessing the impact of non cardiac comorbidities age and quality of life on decision making investigating the role of exercise tests and non invasive imaging in risk stratification and coronary disease detection evaluating the efficacy of anti ischemic antithrombotic and other drugs for CCS optimizing conservative medical therapy for individual patients addressing the challenges in diagnosing and treating patients with microvascular or vasospastic angina without obstructive epicardial coronary disease and enhancing

understanding of CCS complexities in clinical practice through collaborative research and shared decision making To gather further insights into the complexities of CCS management we welcome articles addressing but not limited to the following themes Original studies in the field of CCS such as those dealing with the diagnosis and quantification of coronary disease burden using intravascular imaging methods like intravascular ultrasound IVUS or optical coherence tomography OCT and imaging guided PCI in CCS Papers focused on different management strategies in CCS particularly those reporting important outcome data such as mortality recurrent hospitalizations angina occurrence and quality of life Clinical studies investigating various devices in CCS such as coronary sinus reducers drug coated balloons third generation drug eluting stents calcium modification methods and similar innovations Data derived from big data research in this setting including nationwide datasets or information from multicentric registries Manuscripts focused on the diagnosis and management of non obstructive CCS conditions such as microvascular and or vasospastic angina Manuscripts focused on the diagnosis and management of special and complex populations within the CCS spectrum such as patients with chronic total occlusion CTO Up to date state of the art review articles on relevant CCS topics with large uncertainties or high levels of debate Translational research papers on a case by case basis

Introduction to Cardiopulmonary Exercise Testing Andrew M. Luks, Robb W. Glenny, H. Thomas Robertson, 2013-03-22
Cardiopulmonary exercise testing is an important diagnostic test in pulmonary medicine and cardiology Capable of providing significantly more information about an individual's exercise capacity than standard exercise treadmill or 6 minute walk tests the test is used for a variety of purposes including evaluating patients with unexplained exercise limitation or dyspnea on exertion monitoring disease progression or response to treatment determining fitness to undergo various surgical procedures and monitoring the effects of training in highly fit athletes
Introduction to Cardiopulmonary Exercise Testing is a unique new text that is ideal for trainees It is presented in a clear concise and easy to follow manner and is capable of being read in a much shorter time than the available texts on this topic Chapters describe the basic physiologic responses observed during sustained exercise and explain how to perform and interpret these studies The utility of the resource is further enhanced by several sections of actual patient cases which provide opportunities to begin developing test interpretation skills Given the widespread use of cardiopulmonary exercise testing in clinical practice trainees in pulmonary and critical care medicine cardiology sports medicine exercise physiology and occasionally internal medicine will find Introduction to Cardiopulmonary Exercise Testing to be an essential and one of a kind reference

Cardiopulmonary Exercise Testing in Children and Adolescents Thomas W. Rowland, American College of Sports

Medicine, North American Society for Pediatric Exercise Medicine (NASPEM), 2017-09-05 Exercise testing plays an increasingly important role in the diagnosis and assessment of heart disease and lung disease in children and adolescents. In *Cardiopulmonary Exercise Testing in Children and Adolescents*, leading expert Thomas W. Rowland, backed by the American College of Sports Medicine (ACSM) and the North American Society for Pediatric Exercise Medicine (NASPEM), compiles the latest evidence-based research to provide guidance for clinical exercise physiologists, cardiologists, pulmonologists, and students of exercise physiology who conduct exercise stress testing for young patients. The core objective of the book is to clarify the differences between clinical exercise testing for children and testing for adults. Because of obvious differences between the two populations, test protocols must be modified based on the patient's age, size, level of physical fitness, body composition, intellectual and emotional maturity, and state of cardiac and pulmonary health. Part I provides an introduction to pediatric exercise testing. Part II examines exercise testing methodologies and discusses blood pressure, cardiac output, electrocardiography, oxygen uptake, and pulmonary function. Part III focuses on specific clinical issues addressed by exercise testing, guiding readers through protocols for diagnosis, evaluation, and exercise testing. Part IV explores testing in special populations and focuses on topics such as childhood obesity, neuromuscular disease, and intellectual disabilities. Where applicable, sample forms and checklists provide practitioners with practical materials to use during exercise testing. Sidebars offer readers insight into considerations such as the presence of parents during testing and adjustments of cardiac measures for youth body dimensions. This book serves as a means of focusing and unifying approaches to performing pediatric exercise testing in order to lay the foundation for new and innovative approaches to exercise testing in the health care of children and adolescents.

Essentials of Cardiopulmonary Exercise Testing, Jonathan Myers, 1996. The first practical guide to fully explain how to use gas exchange techniques in clinical and research settings. This helpful book presents important background material on exercise physiology and cardiopulmonary responses to exercise and features previously unavailable information on calibration procedures and quality control. You will learn the following: The physiology behind exercise testing; Ventilatory gas exchange methods and applications; What instrumentation and calculations to use for measuring gas exchange responses; What information can be obtained from gas exchange techniques; How to interpret gas exchange data; How to apply this information to different cardiovascular and pulmonary disorders; Normal values for exercise capacity and reference equations; How to apply more specialized applications of invasive hemodynamic measurements. This unique book also features highlighted key terms, a glossary, and list of scientific abbreviations, a detailed appendix of equations and examples for predicting oxygen uptake, and a list of equipment manufacturers and other helpful resources and organizations.

Computerized Cardiopulmonary Exercise Testing, U.J. Winter, K. Wassermann, N. Treese, H.-W. Höpp, 2012-12-06. The measurement of cardio-circulatory and gas exchange parameters during physical exercise: the so

called ergo spirometry or cardiopulmonary exercise testing CPX as a basis of pathophysiological and clinical research has a long tradition in Cologne Knipping and his coworkers especially Hollmann performed basic research work in healthy subjects In the area of sports medicine bicycle or treadmill exercise testing with parallel serial lactate determinations has gained increasing importance for the assessment of cardiac functional capacity Also in other medical disciplines ergospirometry lost its importance K Wasserman in Los Angeles is to be credited for having further improved the method to its present standard a computerized on line measuring and practicable cardiopulmonary exercise testing procedure The prerequisites were technical innovations such as continuously measuring gas analyzers and personal computers Thereby the knowledge about physiology pathophysiology and clinical circumstances of cardiocirculatory and respiratory regulation during exercise were significantly extended The working groups of W Hollmann Cologne and K Wasserman Los Angeles determined normal values for the gas exchange parameters and derived values for healthy normals in large populations Wasserman and coworkers were able to introduce a differential diagnostic concept for patients suffering from various cardiovascular and cardio pulmonary diseases Many cardiologists working for example in myocardial failure or with rate adaptive pacemakers belong to those who recommended the modern computerized ergo spirometry Furthermore this method is controversially discussed by colleagues working in sports medicine and pulmonary function
